

Java business applications.

"The biggest inhibitor to large-scale applications development today is database connectivity," says Thomas Murphy, product line manager for Objectshare Inc., who notes that the Java Data Base Connectivity (JDBC) specification won't become a standard until later this year. "There...

...But a lack of standards isn't the only problem. Most businesses expect to deploy Java applets by having users download and execute the applets in a Java-capable browser. But developers have found that the most popular Java-capable browser, Netscape's Navigator 2.0, suffers from performance and reliability problems when executing Java applets.

The new JIT Java compilers, which have been developed by several vendors and are built into Navigator, Microsoft's Internet Explorer 3.0, and several Java Integrated Development Environments (IDEs), will speed up the sluggish execution of applets by translating Java byte codes directly into native machine code. Navigator 2.0 and Sun's Java Development Kit use a slower interpreted method of executing Java applets. Performance wasn't the issue at Ichat Inc., but security limitations and developments tools made a difference. Ichat recently released a Java applet version of its chat client, which also comes in Netscape plug-in and Activex control versions. All three clients share nearly identical user interfaces, but the Java version has one significant limitation: While the ActiveX control and plug-in versions let users exchange files with each other while chatting, the Java client can't exchange files because of security limitations imposed by the browser execution environment. Java applets running inside of Navigator or Internet Explorer browsers cannot access the local file system. ...

TEXT:

Seven months after Sun Microsystems released the Java Software Development Kit -- and at least one year after Java was proclaimed as one of the hottest technologies of the decade -- there still are no serious Java business applications. What we have instead is a Java industry that is bursting at the seams with developer tools. But there are no reliable places to run applets (the name for applications written in Java that are executed in the Web browser), nor are there enough standards in place to create serious applets for business users.

"The...

...database connectivity," says Thomas Murphy, product line manager for Objectshare Inc., who notes that the Java Data Base Connectivity (JDBC) specification won't become a standard until later this year. "There...

...But a lack of standards isn't the only problem. Most businesses expect to deploy Java applets by having users download and execute the applets in a Java-capable browser. But developers have found that the most popular Java-capable browser, Netscape's Navigator 2.0, suffers from performance and reliability problems when executing Java applets. "Navigator 2.0 works fairly well with little applets that animate things on your...

...that are broken." Cadis, whose customers include Hitachi, National Semiconductor, and Phillips, has implemented a Java client for Krakatoa, its client-server content management and search engine. But Cadis has had problems with its client because of difficulties with the Java Virtual Machine currently implemented in browsers such as Navigator 2.0.

"In Navigator 3.0...

...correct operation of the GUI environment, JIT [just in time] compilers, faster download time, persistent Java applets, and caching that works property," says Pendleton.

Cadis has developed an alternative Web-based front-end using a combination of JavaScript and HTML frames that is faster and more reliable than the Java applet version. For example, downloading a Java applet using Navigator 2.0 takes several minutes over slow (less than 512-Kbps) links...

...because Navigator 2.0 makes a time-consuming connection to the server to download each Java class and then checks to make sure the date and time stamps are correct on the other downloaded classes.

In Navigator 3.0, developers can compress all of the Java classes into a single file to greatly reduce download time for applets. But for now, "the Java front end makes the most sense in an intranet situation where you have a higher...

...Chris Beal, chief technology officer at Cadis. "But we anticipate Netscape and Microsoft will make Java applets download faster."

The new JIT Java compilers, which have been developed by several vendors and are built into Navigator, Microsoft's Internet Explorer 3.0, and several Java Integrated Development Environments (IDEs), will speed up the sluggish execution of applets by translating Java byte codes directly into native machine code. Navigator 2.0 and Sun's Java Development Kit use a slower interpreted method of executing Java applets.

Security Limits

Performance wasn't the issue at Ichat Inc., but security limitations and developments tools made a difference. Ichat recently released a Java applet version of its chat client, which also comes in Netscape plug-in and ActiveX control versions. All three clients share nearly identical user interfaces, but the Java version has one significant limitation: While the ActiveX control and plug-in versions let users exchange files with each other while chatting, the Java client can't exchange files because of security limitations imposed by the browser execution environment. Java applets running inside of Navigator or Internet Explorer browsers cannot access the local file system...

...time than expected was required to implement certain features. "It's challenging to develop in Java because the development environment isn't as advanced as, say, Microsoft's Visual C++," says...

...have a component piece that lets you do colored text inside a window. For our Java client, we're going to have to write our own class libraries to do that."

Developer tools is where business is booming for Java these days. There are close to 40 Java IDEs available for Windows, Macintosh, OS/2, and Unix platforms, as well as at least...

...tools and many other specialized tools.
A list of these tools is available at [http:// www .cybercom.net/ frog/javaide. html](http://www.cybercom.net/frog/javaide.html) .

No Programming Needed

Some of the tools require just a bit of programming skill -- or...

...0, no programming skills at all. AppletAce lets users select from a pool of customizable Java applets. The AppletAce walks the user through a series of dialog boxes to select the look and feel of the applet.

At the end, the applet and the HTML code needed to execute it are automatically generated for the user. For example, you can...

...and how often you want the applet to update from the text file.

Parts for Java 1.0 is Objectshare's new Java Visual Programming Environment. It doesn't require a lot of programming knowledge to use, and it's also a great way to learn about the structure and limitations of Java classes. Parts for Java lets you lay out Java GUIs with drag-and-drop ...event handlers automatically.

Creating an easy-to-use development package gave Objectshare some insight into Java problems as well. "The Java tools are capable, but performance is still an issue," says Objectshare's Murphy. "There are...

...class libraries still need performance work." The AWT controls the display of GUI elements in Java .

Murphy says quality Java development tools are only now reaching fruition. The result is that end users will be...

...very long," he says.

Applets For Sale

Still, online "storefronts" ready to start selling serious Java applets are already popping up on the Web. Using the Internet as a delivery and...

...downloads and installs at the same time.

Online stores such as the Cafesoft Store ([http:// www .cafesoft.com/store](http://www.cafesoft.com/store)), Cup O' Joe Java Shop ([http:// www .cup ojoe.com/](http://www.cupojoe.com/)), and Gamelan Direct (<http://direct.gamelan.com/>) are open for business. But...
...tech merchants are sure that will change.

"We're looking at adding 15 to 20 Java -based commercial applications by the end of August, and 75 by the end of the...

...user-productivity applications. "I think it will be a year before we see strong intranet Java applications," she says.

In a marketing experiment, Earthweb is distributing its Java Chat client using a technique it calls transparent distribution. Web sites can host their own chats on Earthweb's chat server ([http:// chat .earthweb.com/](http://chat.earthweb.com/)) by licensing a customized piece of HTML code to put on their Web pages. That code downloads Earthweb's chat client and connects to a private chat for that Web site on Earthweb's chat server. The service is free for now and has more than 8,000 chats running on it, according to Earthweb. After Sept. 30, a subscription to the chat server will cost \$200 per year.

But the growing availability of Java -based products can't disguise the fact that Java development is still in the formative stages. While a year may seem like a long time, it's barely a start in the life of a programming language. Java will really take off once more standards are in place and there's a more stable environment for running Java applets.

That will happen eventually -- it just hasn't yet.--Jason Levitt

ABSTRACT:

...client and LiveWire and LiveWire Pro, Web-development tools based on Sun Microsystems Inc's Java object-oriented programming language. Netscape Navigator 2.0 automatically displays various multimedia formats and supports for viewers and applications for 40 different companies. The browser also has a Unix-based mail client that lets users send electronic mail by using...

...Layer for encryption and digital signatures. Netscape is introducing a new scripting language based on Java that doesn't require programming expertise. Netscape Navigator Gold 2.0 is a new product...

TEXT:

...need to improve business communications over the Internet.

The leading provider of World Wide Web browser software will begin shipping a new version of its Navigator client, as well as Web-development tools based on Sun Microsystems Inc.'s Java object-oriented programming language, in December.

These will prove to be key assets for developers...

...need to launch a helper application for each new format.

Unix-based Mail Client

The browser also includes a Unix-based mail client that lets users send electronics mail securely by...

...does support the Simple Mail Transfer Protocol and POP3 standards. Release 2.0 also supports chat and the ability to send and receive files via file transfer protocol. Perhaps even more...

...0, (Mountain View, Calif.)-based Netscape is introducing anew scripting language, which is based on Java but doesn't require programming expertise.

"Netscape Scripting Language is designed to allow power users...

...the client and the server."

Netscape's scripting language is a subset of Sun's Java , and does not let users create new classes of objects. Instead, the browser comes with its own object library.

A separate product, Netscape Navigator Gold 2.0, includes...

...bar that remains in place when moving to the next page.

"Netscape has turned the browser into a universal application-distribution mechanism," said Geoff Baehr, chief network officer at Sun, Mountain View, Calif.

Java technology lets user distribute program functions along with content, since it can include code that...

...or check to see if there is enough disk space to download video. And because, Java is platform independent, developers need to write the programs only once.

Another bonus with Java is that it includes several layers of security, which prevents software that is downloaded to a user machine from infecting the system with a virus. Java applets can include digital signatures, letting corporations restrict usage.

Meanwhile, Netscape also aims to give...

...to different servers and the links will reconnect automatically.

LiveWire includes extensions for forms processing, HTML on the fly and interfacing with legacy applications. "Server extensions allow you to publish HTML pages to a Web server and compile the scripting-language programs so they run anywhere...

...Y.-based electronic publisher.

"My problem has been that not everyone has a Netscape compatible browser, and we're trying to publish a general-interest publication with users coming in from...

...On-Line] and CompuServe," White said.

The Navigator 2.0 evaluation is available at [http:// www .netscape.com](http://www.netscape.com) and will be \$49. The beta version of Navigator Gold 2.0 will...

(Sun Microsystems introduced a new development language for the Internet called " Java " and "HotJava", a Web browser)

ABSTRACT:

Sun Microsystems Inc introduced a new development language called " Java " and "HotJava", a Web browser . The development language is meant to expand Internet use. Commerical service developers will be able to implement CD-ROM-like capabilities in the World Wide Web. The Java language enables HotJava users to develop small, specialized software applications that

allow users to interact...

...Internet server, administrative tools and "netware" capabilities. Toshiba Corp's Advanced Technology Division is using Java in developing a variety of interactive publishing applications. Dimension X is using Java to produce a Web site based on Fox Broadcasting Inc's The Simpsons. Starwave Inc is using Java to develop an interactive version of ESPNnet for its Web pages. Worlds Inc is releasing Worlds Chat which allows people to communicate using 3-D avatars.

...

TEXT:

...CD-ROM-like capabilities in the World Wide Web equipment.

The development language, known as "Java," and an attendant Web browser, known as "HotJava," are part of a sweeping initiative by Sun that also includes the...

...increase demand for its hardware, said Kim Polese, product manager for Sun.

"Companies interested in Java and HotJava are interested in a whole range of products [that] we can supply them," Polese said. "So their use of the software becomes part of a larger relationship."

Java has been quickly offered in Alpha release over the Internet at no cost for about...

...experiment with the ancient calculation tool by moving beads around on-screen, Polese said.

The Java language gives HotJava users the power to develop small, specialized software applications, or "applets," which...

...president of new electronic media technologies at Foote, Cone & Belding, which has begun using the browser in projects with a number of clients. "You have the ability to use audio and..."

...that Netscape Communications is now supporting the new Sun language, said he expects to see Java becoming the standard development language for the Internet very quickly. "We've got a lot..."

...things going at a number of Web sites across North America, and they all use Java," he said.

Other firms jumping into early use of Java include Toshiba Corp.'s Advanced Technology Division, which is developing a variety of interactive publishing...

...Apple MacOS 7.5 ports to follow in the late summer. The beta release of Java and HotJava will be in late summer. Although the core code is available at no...

...pay a low licensing fee for use in their applications, officials noted. The next-generation browser is the beginning of what promises to be a variety of approaches to taking the...

...in 3-D takes place online."

World's first release into the Internet is Worlds Chat, which allows people to communicate with each other using 3-D avatars that the company refers to as "Digital Actors" set in a graphically rich space station.

Worlds Chat is available free for now through Worlds' home page on the Internet. But the capabilities...

...most of the major commercial online services providers in hopes of winning them over to Java , said Polese. "Whatever approach people take, my guess is most, if not all, Web browsers...

...Friedman's list. The company's first production, Talk City, has some of the hottest chat around for kids on the Internet-and it's just getting hotter with a newly...

Jupiter: Tell us about Talk City.

Peter Friedman: We're a chat service on the Internet. We have over 350 moderated chats a week, plus a bunch...

...education, but it's for parents, teachers, and students, and that is a mixture of chat, newsletters and content discussion boards. We just rolled out a partnership with Ingenius to produce the community and chat and discussion boards on a co-branded basis for the Jamz! site.

Will we see...

...t been announced yet. This is the premiere kids-oriented one, though.

What kind of chat technology are you using?

Peter Friedman: We have some interesting technology in the form of a chat application called EZ Talk, which is a Java irc-compatible client that we developed, that basically makes chatting on the Internet as easy as America Online. There are a lot of chat applications on the Internet, but they're sort of a pain to download and configure. With EZ Talk, as long as you have a Java-enabled browser-which is what most people have-when you come to Talk City, or if you come to Jamz!, you just click on Easy Talk and the Java chat application automatically loads in; you don't have to configure it, you just type in your screen name and, bang, you're in the chat with multiple windows and you can send sounds and all kinds of nice features. We...

...new community-oriented technology. The first one is On Live Talker, you know, a voice chat system. So that's not irc-compatible or anything like that, but it's an...

...they are a media-content deal where we create or take over the

community, the chat , discussion board elements of a partner's site and produce it with them on a...

...kids with a real kids-centric focus, very much in the case of teenagers, being chat hosts and producers and things like that. So it's very much programming by kids...particularly 10 to 15-kids start really socializing.

What's your take on three-dimensional chat ?

Peter Friedman: Now, Talk City is predominately text chat . That's not all it is and that's not all it will be, but that's what it mostly is because right now, text chat today provides the best and most scaleable venue for community. There are a lot of...

...D and avatar-type environment) companies, we're creating a new format which we call Chat Scene, which is community and chat combined with photorealistic VR environments in a proactively designed and programmed way. Actually, this whole...

Java -based text chat VolanoChat

... latest buzz in interactive Web technology comes from Volano, whose offer to rent dedicated text- chat space on its server seems targeted at small Web sites. The \$120 annual client license...

...pasting a few lines of code into your own Web page. Users only need a Java -capable browser .

When a user selects that link on your site, the VolanoChat window (a Java applet) pops up to provide access to your chat group. The interface is quite basic: there's an edit box, where you type your comments; a chat panel that displays everyone's contributions; and a listing of group participants. There are almost...

...sites that need to handle more than 10 simultaneous users, Volano will sell you its chat server software, also written in Java , at prices ranging from \$400 for 20 simultaneous connections to \$6,000 for 500 connections...

...can connect to it and specify whether users have the ability to create their own chat groups. You can choose what Java applets, JPEG, or GIF files will show up at the top of the chat window and for how long.

Volano's client license could be just the ticket for small businesses that want to install limited chat capability without incurring further expenses on their own servers.

But the server version, despite its...

...NetMeeting, is free.

* Volano, Mountain View, Calif.; (415) 966-1516; fax: (415) 680-2365; [http:// www .volano.com](http://www.volano.com); subscription: \$120 per year; server software: from \$400 for 20 simultaneous connections.

TEXT:

While they are often used for entertainment, chat packages can also help companies get more mileage out of their training and other efforts...

... are starting to offer more World Wide Web integration via plug-ins to browsers or Java -based clients embedded in browsers, iChat has stronger Web capabilities. It can be used, for example, to provide tours of Web sites, taking questions in chat mode and linking participants' Web browsers to display the same Web page.

Version 2.0...

...addition of file sharing, and increases the flexibility of client support through the use of Java . Future versions will incorporate voice and other multimedia functions, company officials said.

Unfortunately, iChat does not provide the extensive collaboration

tools found in some competing chat packages, such as The Forefront Group's RoundTable, which offers shared workspace to enable a...

...server license to \$8,995 for a 1,000-user server license.

Follow the leader

Chats are divided into different channels, or rooms, and it was possible to "follow" someone from chat room to chat room. We also could follow a leader as he or she surfed the Web. Each...

...the leader moved to a different Web site, the site was displayed on our Web browser. Meanwhile, we could make comments, ask questions and engage in other dialog via the iChat chat window.

The moderation features added in Version 2.0 are mostly oriented to question-and...

...conversations are linked via the iChat ROOM (Real-time Object Oriented Multimedia) Server, which adds chat and participatory Web navigation onto a conventional Web server.

Each chat takes place in a room. As an administrator, it was easy to assign a room...

...plug-ins, we had convenient access to all of the iChat navigational functions. But the chat client took up at least half the screen, forcing us to do a lot of...

...such as a furrowed brow that might indicate confusion are not available to text-based chat. So iChat has built in some text-based stand-ins.

For example, using a semicolon...

...can be reached at matt.kramer@zd.com.

Related article: ConferenceRoom opens door to IRC, Java

While iChat provides more extensive World Wide Web navigation features than its competitors, there are many tools that provide chat capabilities through Web browsers.

One new option is WebMaster Inc.'s ConferenceRoom 1.1, which combines a Web server and chat capabilities in a flexible package that can run on either Windows 95 or Windows NT...

...run on Unix systems.

Because ConferenceRoom 1.0 is based on the IRC (Internet Relay Chat) standard, it can either use its own Java chat client, which plugs into Netscape Communications Corp.'s Navigator or Microsoft Corp.'s Internet Explorer, or use a conventional IRC-based chat client.

We installed the ConferenceRoom server on a Windows NT Advanced Server and used the Java client under Internet Explorer 3.0.

WebMaster has stripped out many of the features found in other IRC clients in order to keep the Java applet less than 10K bytes in size. Some functions available in other IRC clients, such as the ability to transfer files, are not available in the ConferenceRoom Java applet.

Like iChat, ConferenceRoom holds chats by assigning topics to a particular room. It also...

...WebMaster, of Santa Clara, Calif., can be reached at (408) 345-1800 or at <http://www.webmaster.com>.

WEB CHAT SOFTWARE VENDOR iCHAT AFTER QUARTERDECK, AMERICA ONLINE WITH NEW CHAT ENGINE

TEXT:

Web-enabled chat software house iChat Inc has revealed its August product release plans, casting itself as the standard for Internet chat and plans to steal the limelight from leading chat providers Quarterdeck Corp and America Online Inc. Not exactly a review - we only had a chance to discuss the intentions and abilities of the software - but chat engines are a fundamental of the Internet, not because they are imperative, but because so...

...president Andrew Busey may deserve his own spotlight for taking the concept of Web-integrated chat to venture capitalists and coming back with his pockets bulging after \$750,000 in one...

...2.0 is set for release in August. IChat's client software enables users to chat within a box at the bottom of a Web site without having to launch a separate application. The object-oriented server software, called Rooms, enables real-time chat to be integrated into existing or new Web sites. It is written in a progressive C-based language similar to Java that iChat licensed exclusively from an Amsterdam company and with the 2.0 release will support Java, Mac OS, Windows, Windows NT, Solaris, HP-UX and others, although demand for an AIX...

...for Internet Explorer will be released to coincide with the next version of the Redmond browser.

... the server software, users won't need the plug-ins unless they plan on "heavy chat." But is there a booming market for chat? Busey has heard the question so many times and is exasperated at such basic disbelief...

...Online's revenues coming from subscribers' Web talk and Morgan Stanley & Co projections that the chat market will grow to \$660m by the year 2000. Forrester Research Inc said iChat's...

...figures for multiple tens of thousands of users. Client enhancements will include the ability for chat users to send files to each other through the site and enable users to save chat session text. iChat is eyeing Network Computers and Internet terminals. Busey says he'd like...

...next few months. iChat's biggest marketing coup to date has been buying the word "chat" on Yahoo's search engine, so its advertisement comes up every time someone searches the word "chat." IChat claims "chat" is the third most searched word on Yahoo, preceded by, you guessed it, "sex" and...

VolanoChat Java Solution Turns Ordinary Web Sites Into Interactive Money Makers.

TEXT:

MOUNTAIN VIEW, Calif.--(BUSINESS WIRE)--Aug. 27, 1996--Volano, the leading provider of Java (TM) chat solutions, today announced the immediate availability of VolanoChat(TM), the first Java based chat solution to offer in-room advertising, complete administrative control, and availability in five languages.

VolanoChat works with all Java-compatible browsers, including Microsoft(R) Internet Explorer 3.0 and Netscape Navigator(TM) 3.0. VolanoChat supports banner advertisements in its chat rooms to help sites generate revenue. Banner advertisements are shown at the top of each chat

and it's FREE!

" Chat has always been the top feature of the on-line services but has been held back on the Internet due to difficult software and the absence of quality chat programming," said Peter Friedman, President and CEO of LiveWorld Productions, the studio that produces Talk City. "EZ Talk makes it easy. Talk City provides the quality programming and context. Now chat on the Internet can really take off."

EZ Talk supports a variety of powerful chat features including:

- * hot linked Web page URLs embedded in user chat text
- * graphic banners in chat rooms
- * separate windows for private conferences and multiple rooms
- * user to user sending of sounds

EZ Talk is available now at no charge at www.talkcity.com. Any browser supporting Java such as Netscape Navigator 3.0 and Microsoft Internet Explorer 3.0 will automatically engage...

...Talk was developed by LiveWorld's engineering team in collaboration with engineers from SportsLine USA (www.sportsline.com) a leading Internet provider of sports entertainment and information services.

About Talk City and LiveWorld Productions, Inc.

Talk City (www.talkcity.com), a service from LiveWorld Productions, is an Internet community for those who believe...

...April 96 the service has rapidly grown to over 200 scheduled on-line conferences, or chats, each week, managed by trained conference hosts, supporting the first structured, quality community service of...

...subject they wish. The service runs on Netscape Web servers and Quarterdeck Global Stage IRC Chat servers and is accessible with a standard web browser such as Netscape 3.0 and LiveWorld's EZ Talk Java chat client or any other IRC compatible chat client.

LiveWorld Productions, Inc. (www.liveworld.com) is an Internet content studio creating and operating high quality original programming for ...

WebMaster Releases ConferenceRoom; Integrate Real-Time Chat Into Web Pages with the First IRC Chat Server for Windows NT and 95.

TEXT:

...1996--WebMaster Inc. today announced the availability of ConferenceRoom, the first fully functional Internet Relay Chat (IRC) server for Windows NT and Windows 95. Written specifically to take advantage of the...

...performance of Microsoft Windows, ~~ConferenceRoom allows general computer users to add standards-compliant real-time chat on their web page. It also has greater reliability, performance, and scalability than UNIX chat servers.~~

... through a built-in theme-based web server, ConferenceRoom differentiates itself from other ~~web-based chat systems by allowing the seamless addition of real-time chat to an existing web page.~~ Using a Java-enabled web browser, a first time visitor is no longer required to download a proprietary chat client. The web server interface provides features such as one to one and "party-line" chats, functionality for highly populated events, and the ability to create custom chat web themes in addition to those provided -- features previously only found in the proprietary interfaces...

...our clients."

ConferenceRoom also functions as a universal client. It can be accessed through any Java-enabled browser such as Microsoft's Internet Explorer 3.0 and Netscape Navigator 2.0 and above...

...ConferenceRoom is perfect for support, distance learning applications, virtual meetings, or as a place to chat with friends. It's ease of use offers companies the ability to run cost-effective conferencing, support, and training operations globally.

"With ConferenceRoom, it's now so easy to integrate chat into your web site, there's no reason not to do it," said Mark Owen...

...president of marketing for WebMaster, Inc. "From virtual meetings to distance learning, the range of chat applications has made its implementation a necessity rather an option. The only problem I've...

...web, providing greater ease of use and functionality, including a web server interface with a Java-based client. ConferenceRoom is written to the same specifications as UNIX IRC servers. This ensures...

...products for web site development and administration. Products include solutions for network news, Internet relay chat and Internet commerce.

ichat's 2.0 Release Sets the Standard for Web-Integrated Chat

TEXT:

Company heralds a new era in chat with event moderation, increased client functionality with Java support and a distributed server
AUSTIN, Texas, Aug. 5 /PR Newswire/ -- ichat, Inc. the leading supplier of Web-based, real-time chat communications software, today announced ROOMS(TM) version 2.0, the second major release of ichat's Web-integrated chat software. ROOMS version 2.0 offers event moderation capabilities, Java support, increased client functionality and distributed server capabilities to existing Web sites. For a demonstration ...

...visit ichat on the World Wide Web Tuesday, Aug. 6, 3:00p.m. (CST) at www.ichat.com/pressroom.

ROOMS is real-time chat software that, when added to existing Web sites, transforms static content delivery into interactive communication. Requiring only a few lines of HTML to install, ROOMS is the most effective way to attract and keep net surfers interested...

...to offer. People visit a Web site because they are interested in the content, and chat will keep them engaged and bring them back.

"ichat is continually raising the level of chat services to users of the Web and has firmly established itself as the market leader, offering the only fully Web-integrated chat product," said Busey. "This latest version of our ROOMS server is a milestone in the evolution of chat on the Internet. ROOMS version 2.0 offers more capabilities and greater platform support than...

...the speaker's discretion, interact with the speaker in front of the audience. Users may chat freely with each other in other rooms attached to the auditorium while continuing to listen...

...meeting areas, building a great sense of community around a common event or discussion topic.

Java Support

With ROOMS version 2.0, ichat expands its client support to Java, offering users a comparable ease-of-use chat application typically found only in the major online services. ichat's Java support also provides a powerful interface for UNIX clients, who have been unsupported by browser plug-ins.

Increased client functionality

ichat's 2.0 release also offers enhancements to its browser-integrated client for Netscape 2.x for Windows 95, Netscape 2.0 for Macintosh and...

...0 beta. ichat users now have the ability to share files, add sound to their chats, save their conversations and send private messages to a selected group.

Scalability

As chat's popularity skyrockets on the World Wide Web, the need to support tens of thousands...

...of ROOMS version 2.0. ichat's distributed server offers support for a multitude of chat pages or a large single event. Web sites using ROOMS version 2.0 can create a chat network environment which allows a user to seamlessly navigate the site, chat in various areas and participate in events without having to re-enter passwords or log...

...3.0 for Windows 95 and NT

-- ichat also supports all browsers with support for Java, frames, Plug-

ins and Active X controls
-- ichat provides a stand-alone client for Windows...

...Andrew Busey in 1995, ichat currently employs 30 people. ichat sells Web server software to chat - enable Web and Intranet sites. ichat's client, available for free from the company's Web page at www.ichat.com, integrates with popular browsers on PC and Mac platforms to bring together real-time chat and HTML within a single window. Access to ichat ROOMS is also possible through a stand-alone...

**WEB-BASED CHAT SERVICE SOFTWARE DEVELOPER ICHAT, UP AGAINST, QUARTERDECK,
 HAS AUGUST KIT RELEASE**

TEXT:

Web-enabled chat software house iChat Inc has revealed its August product release plans, casting itself as the standard for Internet chat and plans to steal the limelight from leading chat providers Quarterdeck Corp and America Online Inc. Founder and president Andrew Busey may deserve his own spotlight for taking the concept of Web-integrated chat to venture capitalists and coming back with his pockets bulging after \$750,000 in one ...

...2.0 is set for release in August. IChat's client software enables users to chat within a box at the bottom of a Web site without having to launch a separate application. The object-oriented server software, called Rooms, enables real-time chat to be integrated into existing or new Web sites.

Heavy chat

It is written in a "C-based language similar to Java" that iChat licensed exclusively from an Amsterdam company and with the 2.0 release will support Java, Mac OS, Windows, Windows NT, Solaris, HP-UX and others, although Busey says demand for...

...for Internet Explorer will be released to coincide with the next version of the Redmond browser. Busey says with version 2.0 of the server software, users won't need the plug-ins unless they plan on "heavy chat." But is there a booming market for, uh, chat? Busey seems exasperated at such basic - yet crucial - queries - "Yes, it's a huge market...
 ...Inc's turnover coming from subscribers' Web talk and Morgan Stanley & Co projections that the chat market will grow to \$660m by the Year 2000. Forrester Research Inc said iChat's...

...figures for multiple tens of thousands of users. Client enhancements will include the ability for chat users to send files to each other through the site and enable users to save chat session text. IChat is eyeing Network Computers and Internet terminals. Busey says he'd like...

...few months. IChat says its biggest marketing coup this far has been buying the word "chat" on Yahoo!'s search engine, so that its ad comes up every time someone searches the word "chat." iChat says "chat" is the third most searched word on Yahoo!, preceded by, you guessed it, "sex" and ...

... an integral part of corporate networking, has set the scene for a numbing amount of browser innovations. Over the past two years, improvements on the original HyperText Markup Language (HTML) specification led to more attractive, easy-to-access pages. Similar improvements in the HyperText Transfer...

...compliance. Although there are no internationally sanctioned standards, users and developers have agreed on the HTML 1.0, 2.0 and 3.0 standards. HTML 1.0 compliance is almost a nonentity anymore: If a browser doesn't meet these specifications, it's probably a Gopher browser in disguise. The 2.0 specification added support for improved text and graphics handling, and HTML 3.0, which is still being integrated into new browsers, is a combination of once...

...We used the sample test pages at <http://cavern.uark.edu/wrg> and BrowserCaps (<http://www.objarts.com/bc>) to deduce whether each browser met the necessary requirements. Many browsers still include proprietary enhancements.

VRML, a popular addition to...

...through a major maturity stage shortly. Version 2.01 will be based on Sun's Java and the Moving Worlds Technology developed by Netscape and Silicon Graphics.

Netscape, which makes proprietary enhancements a regular feature in its Navigator releases, has added frames, plug-ins, Java support, JavaScript support, Progressive JPEG, client-side image mapping and text manipulation. Not to be...

...be easily integrated.

Netscape Navigator, v2.0, Netscape Communications Corp.

Netscape put its multifaceted Web browser on 75 percent of Internet users' desktops in 1995, according to statistics from popular commercial...

...than the first.

Netscape 2.01, which was released in the middle of March, addresses Java and JavaScript security concerns. Rogue Java applets can't fool client machines into connecting to random sites, and users' e-mail...

...an upgrade of the earlier-integrated Network News Transfer Protocol (NNTP) standard news reader.

The browser contains a vast number of new features and updates. Java , licensed from Sun Microsystems, is now an integral part of the 32-bit Netscape products...

...to the Internet tools market, it offers, with Internet Explorer, a strong, feature-rich Web browser with extensive support for Windows95, HTML 3.0 and VRML.

Since many users will be upgrading from an earlier version, the...

...were the other products based on the SpyGlass Mosaic engine. It had all of the HTML 2.0 features, most of the proposed HTML 3.0 characteristics and a couple of proprietary innovations. Proxy support is done via a...

...that were noticeably quicker in their manipulation of 3-D files. Future Microsoft modules promise Java support and inline viewing of documents created in Microsoft Office products.

In fact, version 3.0, which Microsoft says will be released early in the third quarter, should have Java , Object Linking and Embedding Custom controls (OCX) architecture (for running Visual Basic and Visual C++ applets in a similar fashion to Java), HTML 3.0 frames and style sheets, JavaScript and VBScript.

Internet Explorer performance was top-notch, demonstrating its family lineage to SpyGlass Mosaic. The product was originally designed to be the browser of Microsoft Network users, and indeed, it was the quickest product tested over dial-up...

...corporate networks, has recently been upgraded to support Windows95, and now includes a terrific Web browser . NetManage offers WebSurfer as a free component, but users will need to purchase either Chameleon or Chameleon/NFS suite to receive other components, such as FTP.

The browser was impressive, with full HTML 2.0 and 3.0 support, as well as table rendering features that were the...

...bookmark files into its hotlist format (for display and use in a frame within the browser), but we would have expected a larger number of predefined hotlist sites. We did like...

...Microsoft/Intel AVI video support, but Microsoft and Netscape include similar features. NetManage includes an HTML editor in Chameleon, so not only can users view source files, they can edit them by launching a helper applet from the browser .

The installation CD included both Windows95 and Windows 3.1 versions, and let us selectively...

...times on dial-up and over Ethernet.

We found a couple of idiosyncrasies in the browser . The setup is fragmented between two options within the Settings menu. Furthermore, disabling inline GIFs...

...tips," which a majority of the other browsers had. The lack of integration between the browser , news reading and e-mail was also a sore point.

Emissary Desktop Edition, Version 1...

...has gone into developing its integrated core, and not enough has gone into making its browser the most advanced product. Although it supports many of the features Netscape Navigator and Microsoft Internet Explorer have, it lacks support for Java and LiveObjects.

While Emissary Desktop Edition 1.1 is a 16-bit application, we found

...

...Windows platforms in one executable.

Attachmate has gone to great lengths to integrate the Web browser , FTP, Telnet, UseNet news reading, electronic mail and File Manager components. Emissary uses its Client...

...fully supports OLE 2.0, we could drag and drop text and graphics from the browser to other OLE 2.0-compliant applications. We also used its multiple user configuration to transfer settings between computers during testing.

We were also impressed by Emissary's integrated HTML editor and its one-click upgrade, which allows for updates whenever new components or objects...it completed the page in 30.5 seconds. We were also impressed with its integrated HTML editor (unique in our testing).

Version 2.0, which should be out by the late spring, will have a 32-bit architecture, native Java, VRML and Macromedia ShockWave support (for viewing Macromedia Director animations and slide shows), as well...

...0, Symantec/Delrina Corp.

Delrina, recently taken over by Symantec, has produced a very competitive browser, and included it in a suite with its WinComm and WinFax products. But while Delrina...

...Office. We especially liked the full OLE 2.0 compliance for moving documents from the browser into popular office applications. The Cyberjack Guidebook was well integrated with Windows95, and let us...

...Cyberjack's components are impressive--Archie, Cyberwizard, FTP, Finger, Gopher, Guidebook, Image Manager, Internet Relay Chat (IRC), News Reader, World Wide Web browser and Zip archive Manager. The fault with Cyberjack is similar to Emissary--too little went into the browser.

The 7.02 maintenance release fixed a number of HTML compliance issues, such as tables and high-color graphics viewing, but there is still no...

...to Web sites initially (although it did have a "ping site" option, something that other browser makers have overlooked). The browser lacked any knowledge of other components of the Internet suite (even FTP and Gopher). Images...

...feel to Netscape Navigator, while performing solidly. In fact, PowerBrowser has improved on the Navigator browser theme by combining its clean, feature-rich interface with drag-and-drop bookmarks and a...

...commercial releases promise Visual Basic for Applications support, full integrated e-mail and news reading, Java, an HTML editor with "wizards," VRML and database support.

NCSA Mosaic 2.0, National Center for Supercomputing...

...better online support. Also, the lack of many advanced multimedia features, including frames, plug-ins, Java, advanced news reading and e-mail reception show Mosaic's limitations. NCSA is playing catch...

...number of customization options. Although we were impressed by the sheer number of ways that HTML pages can be changed (font colors for every type of HTML tag, table customization, audio configuration and so on), it can be very confusing to Internet novices and irritating to advanced users who just want to start a browser and start surfing. The proxy support is also a little different from that of other...

...proxy server's address to get it to work.

When we tested Mosaic against our HTML compliance site, it met a majority of the IETF HTML 2.0 and Netscape-extensions, but failed the majority of the W3C HTML 3.0 features. While it properly performed a client pull (automatic reloading of the current or another HTML document), it didn't support tables. It promised to display images while loading, but we...

...nearly 50 percent.

Enhanced Mosaic, Version 2.1, SpyGlass Corp.

SpyGlass Enhanced Mosaic distributes its browser to organizations that want to include it in their products. Despite sharing a family lineage a Web browser and its helper applications are weak, it was not part of the upper echelon of...

...product's main features only appeared to be on par with Netscape 1.1, its HTML 3.0 compliance was on par with Internet Explorer. SpyGlass has been an innovator of...

...for Progressive JPEGs (similar to interlaced GIF), client-side image mapping, color-highlighted text and HTML 3.0 table support, and inline audio. SpyGlass has also thoroughly utilized context-sensitive right...

...support only lags behind Netscape and NCSA. There was no support for plug-ins or Java.

Enhanced Mosaic also includes multiple levels of authentication: CERN- and HTTP-compatible Basic Authentication, RSA...

...file names or Windows95-style open/save file management boxes.

The Mosaic In A Box browser includes CompuServe Wallet, which is a similar version of the electronic payment system included with...

...but not nearly the number and variety included with Frontier SuperTCP Suite 96.

Mosaic's HTML compliance was on par with SpyGlass Mosaic, but we found a number of odd occurrences...

...product never gave us the impression that it conformed entirely to Windows95 standards. In the browser, the right mouse button should have given us context-sensitive menus but never did. The...

...be easily modified, and can import Mosaic and Netscape bookmarks.

Unlike the other products, SuperTCP Browser doesn't have an input bar for the URL. To open an Internet resource, we...that's necessarily useful in corporate America, where proxy servers lock out access.

Mariner's HTML compliance was also questionable. It didn't support tables or advanced inline features. Color support...

ICHAT OFFERS NETSCAPE PLUG-IN FOR TRULY INTERACTIVE WEB INTEGRATED CHAT SESSIONS

TEXT:

First Vendor to Deliver Real-Time Web Integrated Chat

... first plug-in to enable World Wide Web visitors access to real-time, Web-integrated chat sessions. The Netscape Navigator 2.0 plug-in architecture allows third-party developers to embed their applications directly into Netscape, enabling seamless access from within a Web page. Chat systems allow Internet users to interact directly with one another.

Generally, the Web is a static medium permitting the one-way transfer of data, but with better integration of chat on the Web, its status is about to change. Chat is valuable because it brings people together electronically in a way that makes it easy to communicate with one another. Unlike other forms of chat, Web-integrated chat enhances a company's Web presence by delivering to visitors the opportunity to interact with others in real-time, without having to launch a separate application to enter chat rooms. The addition of Web-integrated chat enables the Web site to develop a sense of community among its visitors who already...

...a common interest in the content of the site.

The iChat Plug-in seamlessly integrates chat with Web pages, delivering visitors the best of both worlds -- the ability to view Web...

...with others viewing the same Web page. Once installed on the Netscape Navigator 2.0 Browser, the iChat plug-in will automatically launch when visitors connect to a Web site that...

...The iChat Plug-in also allows users to click on hyperlinks to the Internet Relay Chat (IRC), the most popular form of chat currently available on the Internet. The iChat Plug-in is the first Web-based system...

...provides a powerful solution for information delivery, including the integration of graphics, text, forms and Java," said Andrew Busey, president of iChat. "At iChat, we are introducing real-time Web-integrated chat to help transform the evolving architecture of the Web, enabling organizations to turn their Web...

...an existing Web site. The product extends that site's capabilities by adding real-time chat functionality and the concept of virtual space. The iChat Interactive Server can be used to...

...to move through and interact with other objects, as well as view other Web pages.

Chat is a popular element of the major online services. When a chat room is embedded into a Web site it is fully integrated with a Web server, enabling visitors to build chat rooms with hyperlinks to their home pages or to create Web pages that are tied to specific pieces of the chat room. The iChat Interactive Server, in conjunction with iChat's Plug-In for Netscape, makes it possible to run a real-time chat system and to integrate that chat system with a Web site. Visitors can download the

ichat Plug-in for Netscape on...

...privately held company whose mission is to provide a user-friendly channel for accessing Internet chat resources and provide tools for creating robust and professional chat servers that can be integrated with the World Wide Web. For more information on the company and its products, visit the ichat Web site at [http:// www .ichat.com](http://www.ichat.com).

... the full power of the Internet, by providing full-featured client applications including a Web browser, USENet News reader, FTP (File Transfer Protocol) file transfer, Internet chatting sessions (IRC - Internet Relay Chat), e-mail via Microsoft Exchange (the built-in e-mail client software in Windows 95...

...Image and Zip managers with built-in Norton AntiVirus.

Development Tools

The company licensed the Java Internet programming language technology from Sun Microsystems and released the first Java development environment for Windows 95 and NT, code named "Cafe". Cafe is Symantec's fully integrated development environment which seamlessly integrates Sun's Java Development Kit (JDK) for the creation of Java applets for Internet web pages. Cafe provides Java developers with class and project management capabilities within a graphical development environment. Developers who have licensed Symantec C++ can download Cafe from Symantec's web site at www.symantec.com.

Java, developed by Sun, is an object-oriented programming language that operates independent of any particular operating system or microprocessor. Java programs -- called applets -- can be transmitted over a network and run on any client, providing the multimedia richness of a CD-ROM over corporate networks and the Internet. Java has been widely hailed by programmers because it eliminates the need to port applications, and...

(USE FORMAT 7 FOR FULLTEXT)

TEXT:

Netscape Communications Corp's plans for version 2 of its Navigator Web browser mark the most radical departure from standard Hypertext Mark-up Language seen so far, according...

...source. The application programming interface makes it more like an operating system than a Web browser . Each window will be able to display graphics or text and may be made scrollable. Other new features that will be in the browser include fully integrated electronic mail and Internet relay chat . The sources said that the new interface is the basis for the company's work on integrating Macromedia Inc's Director player and Adobe Systems Inc Acrobat reader into the browser . Macromedia said its software will enable QuickTime movies, for example, run within Netscape documents as...

...within the next couple of months. However, the promised implementation of Sun Microsystems Inc's Java language will have to wait for later. Although the company is working to have it...

...to implement the language interpreter by then across all its systems. The impending addition of Java compatibility does mean it is likely that the burgeoning complexity of Netscape Navigator will reach its peak with the version 2.0 release, since Java will tend to make support for additional data types within the browser itself redundant. Instead of having to hard-code new features explicitly into the client, the emphasis will move towards content providers placing Java 'applets' within their documents. Netscape was unavailable for comment.

TEXT:

The Web browser is becoming more than just a browser . Three companies are working to develop multi-media extensions that allow for live communications and...

HotJava From the Sun From Sun Microsystems, comes HotJava, a browser that recognizes "Applets," special interactive application protocols that are written in the Java computer language. Because the Java language is written in "machine independent bytecodes," according to Sun Microsystems' Web page, Java can be migrated seamlessly onto Web.

With the development of the HotJava browser and the Java language, Sun Microsystems is looking to establish itself as a main developer of animated Web-centric applications that can enhance advertising and communications offerings such as chat . Specifically, the HotJava browser will enable content developers to feature an advertising "tickertape" along edges of the Web page. It has been reported that Netscape will begin integrating HotJava technology into its browser sometime over the next several months.

The technology is available in alpha format for free download from the Web address (www . java .sun.com).

Worlds Inc. Gets Competition The early entrant in the development of 3-D...

...debut its new product, Alpha World, in June.

Alpha World is an extension of Worlds Chat that debuted in April 1995.

Alpha World operates on a TCP/IP set of client/server commands and is available at www .kbworlds.com. For consumers with a 486 or higher PC, and at least 8 MB...

...encouraged to develop their own avatars or "digital actors." Currently, Alpha World's predecessor, Worlds Chat , is the only functioning 3-D environment on the Web. Worlds Inc. has gone to great lengths to make its products bandwidth considerate. Currently in open testing mode, Worlds Chat operates adequately at 14.4 kilobits per second.

SGI Beefs Up VRML Finally, the latest...

...rapid pace and over the next several months will begin making limited appearances as a browser add-on viewer called WebSpace.

VRML is based on open standards and can be viewed with the use of any Netscape-compatible browser . It was developed using the Open Inventor object -oriented 3-D toolkit. SGI and Template...

...to manage VR worlds. (virtual reality) (Black Sun Interactive Inc introduces CyberHub server software, CyberGate browser and CyberSockets API) (Product Announcement)

...ABSTRACT: application works with a client plug-in for Netscape Navigator that utilizes CoolTalk for live chatting and Live 3D to render VR scenes. Java and VRML software developers can utilize Black Sun's new CyberGate browser and CyberSockets API to facilitate 3D browsing in their applications. CyberHub employs unique algorithms for managing multiuser interactive environments. The software works in tandem with existing HTML servers, but can be located on a separate server. The 3D environment can include as...

... visitors" to their 3-D worlds in order to trigger appropriate behaviors and to facilitate " chat " and "whiteboards." Users, in turn, need simple VR tools to create their 3-D home...

...and works with a free client plug-in for Netscape's Navigator, utilizing CoolTalk for " chat " and Live 3D for the rendering of VR scenes. Upon signing on, visitors select a 3-D avatar to represent themselves in cyberspace. CyberGate, a multi-user browser , and CyberSockets, an application programmers interface (API), allow Java and VRML developers to incorporate 3-D browsing into custom applications.

Constructing and managing the...

...possible by the virtual-reality modeling language (VRML) requires more infrastructure software than 3-D HTML sites. For one thing, visitors to normal 2-D HTML Web sites do not have avatars that interact with each other. In 3-D virtual...

...visitor is represented by a unique 3-D avatar. Interaction among avatars, such as private " chat ," needs to be arbitrated by sophisticated server algorithms.

"There are actually four parts to a...

...is installed as an additional VRML-only server that works in parallel with any existing HTML server, but not necessarily on the same physical computer system.

With CyberHub 3-D environments...

...information with any scene in the space.

The API answers to calls from C and Java applications. "We want to be totally standardized on VRML, HTML and Java , so that anybody's 3-D creation tool can be used with CyberHub, as long as it only uses VRML, HTML and Java ," said Stuart.

On the user side, ParaGraph International Inc. (Campbell, Calif.) announced that a large ParaGraph's 3-D VR tools are available from its Web

site at: [http:// www .us. paragraph.com](http://www.us.paragraph.com)

People Space permits visitors to adopt a 3-D persona, or avatar...

...used to navigate through a 3-D VR while communicating with other visitors using text " chat " or with handwritten electronic ink.

Links aplenty

Upon signing onto People Space, a core 3...

...Space Builder, ParaGraph offers Internet 3D Space Builder and Internet 3D Font Magic. at [http:// www .paragraph.com](http://www.paragraph.com).

The Virtual Home Space Builder provides a basic set of VRML authoring tools...

...with a textured "ground" and "sky." (If you have a fast connection and a VRML browser such as Navigator, then try ParaGraph's 3-D logo-world at [http://vrml.paragraph...](http://vrml.paragraph.com)

TEXT:

Java -based text chat VolanoChat

... latest buzz in interactive Web technology comes from Volano, whose offer to rent dedicated text- chat space on its server seems targeted at small Web sites. The \$120 annual client license...

...pasting a few lines of code into your own Web page. Users only need a Java -capable browser .

When a user selects that link on your site, the VolanoChat window (a Java applet) pops up to provide access to your chat group. The interface is quite basic: there's an edit box, where you type your comments; a chat panel that displays everyone's contributions; and a listing of group participants. There are almost...

...sites that need to handle more than 10 simultaneous users, Volano will sell you its chat server software, also written in Java , at prices ranging from \$400 for 20 simultaneous connections to \$6,000 for 500 connections...

...can connect to it and specify whether users have the ability to create their own chat groups. You can choose what Java applets, JPEG, or GIF files will show up at the top of the chat window and for how long.

Volano's client license could be just the ticket for small businesses

that want to install limited chat capability without incurring further expenses on their own servers.

But the server version, despite its...

...NetMeeting, is free.

* Volano, Mountain View, Calif.; (415) 966-1516; fax: (415) 680-2365;
<http://www.volano.com>; subscription: \$120 per year; server software: from \$400 for 20 simultaneous connections.

Best Web browser . (includes related article on browsers other than Netscape Navigator and Microsoft Internet Explorer, where to...

ABSTRACT: Netscape Communications' Navigator Web browser currently enjoys an overwhelming market share, and Microsoft's Internet Explorer has emerged as its...

...browsers for viewing sophisticated Web content because both companies have developed their own extensions to HTML . Both browsers rate very good in ease of use, and switching between the two is...

...only option. Navigator is the better of the two at reading Web pages; it supports Java and plug-ins, features that have not yet appeared in Internet Explorer. Internet Explorer has...

TEXT:

A browser is your passport to sites and sounds on the Web. Is it time to trade...

... all the World Wide Web's latest bells and whistles if you have the right browser --one that can take advantage of whatever a site has to

offer.

Not long ago...

...mortgage payment. Other browsers just can't keep up. They don't support the latest HTML extensions, they're slower at downloading, or they lack features in some other crucial area...

...we have to reserve judgment on some features, such as Internet Explorer's support for Java . But by the time you read this, both Navigator 3.0 and Internet Explorer 3...

...alike in many ways. Both offer a core set of features that conform to the HTML 3.0 standard, so you can use either product to see basic Web text, headlines...

...salvo when it added support for three important Web tools: frames, plug-ins, and the Java programming language. Frames make Web sites easier to navigate by dividing them into multiple, independently scrollable panes. Plug-ins, third-party program modules that extend a browser 's capabilities, and Java , which is used to create embedded Web apps, both make sites more interactive. Thanks to these extras, Navigator has grabbed an extraordinary 75 percent of the browser market, compared to about 10 percent for Internet Explorer.

But now it looks as if...

...has also developed ways to improve that technology. The beta we saw didn't have Java or plug-in support, but we expect the final version of Internet Explorer 3.0...

...is that Internet Explorer has become the better choice for workgroups. We tried the whiteboard, chat , and Internet phone tools that both products have added, and Internet Explorer really wowed us. Neither browser allowed more than two people to simultaneously use the phone, but Internet Explorer easily beat Navigator's one-to-one chat and whiteboard utilities by letting several people participate at once. The real tie-breaker is...

...Explorer a popular way of providing technical support over an intranet, for example.

So which browser is better? It's a tough call. For Web surfing, either is fine. But if the idea of using a browser to work with other people appeals to you, Internet Explorer's NetMeeting is a killer set of apps.

Which browser will win in the long run? That's even harder to predict. Navigator has the...

...comparison of Navigator 3.0 and Internet Explorer 3.0, read on. May the best browser win.

Ease of Use

Internet Explorer:Very good

Navigator:Very good

State of the applet: there are still no serious Java business apps. (Java applets) (Technology Information)

ABSTRACT: Software industry observers report there are plenty of Java application development software kits available but there are no truly functional business applets and no system that supports the programs. The lack of Java -based business applets is a direct result of the dearth of Java development standards. Netscape's Navigator 2.0 Web browser supports Java applets but fails to reliably process applets that are more complex than simple Web page animations. However, Netscape, Microsoft and other companies are expected to remedy this problem and address Java applet slow download times in the newest versions of their browsers. However, these obstacles are not stopping companies from developing Java development tools. Many of the products require little or no Java programming expertise but this ease-of-use feature interferes with developer's ability to create complex Java business applications.

TEXT:

Seven months after sun Microsystems released the Java Software Development Kit--and at least one year after Java was proclaimed as one of the hottest technologies of the decade--there still are no serious Java business applications. What we have instead is a Java industry that is bursting at the seams with developer tools. But there are no reliable places to run applets (the name for applications written in Java that are executed in a Web browser), nor are there enough standards in place to create serious applets for business users.

... database connectivity," says Thomas Murphy, product line manager for Objectshare Inc., who notes that the Java Data Base Connectivity (JDBC) specification won't become a standard until later this year. "There ...

...But a lack of standards isn't the only problem. Most businesses expect to deploy Java applets by having users download and execute the applets in a Java -capable browser . But developers have found that the most popular Java -capable browser , Netscape's Navigator 2.0, suffers from performance and reliability problems when executing Java applets.

"Navigator 2.0 works fairly well with little applets that animate things on your...

...that are broken." Cadis, whose customers include Hitachi, National Semiconductor, and Phillips, has implemented a Java client for Krakatoa, its client-server content management and search engine. But Cadis has had problems with its client because of difficulties with the Java Virtual Machine currently implemented in browsers such as Navigator 2.0.

"In Navigator 3.0...

...correct operation of the GUI environment, JIT (just in time) compilers, faster download time, persistent Java applets, and caching that works properly," says Pendleton.

Cadis has developed an alternative Web-based front-end using a combination of JavaScript and HTML frames that is faster and more reliable than the Java applet version. For example, downloading a Java applet using Navigator 2.0 takes several minutes over slow (less than 512-Kbps) links...

...because Navigator 2.0 makes a time-consuming connection to the server to download each Java class and then checks to make sure the date and time stamps are correct on the other downloaded classes.

In Navigator 3.0, developers can compress all of the Java classes into a single file to greatly reduce download time for applets. But for now, "the Java front end makes the most sense in an intranet situation where you have a higher...

...Chris Beal, chief technology officer at Cadis. "But we anticipate Netscape and Microsoft will make Java applets download faster."

The new JIT Java compilers, which have been developed by several vendors and are built into Navigator, Microsoft's Internet Explorer 3.0, and several Java Integrated Development Environments (IDEs), will speed up the sluggish execution of applets by translating Java byte codes directly into native machine code. Navigator 2.0 and Sun's Java Development Kit use a slower interpreted method of executing Java applets.

Security Limits

Performance wasn't the issue at Ichat Inc., but security limitations and development tools made a difference. Ichat recently released a Java applet version of its chat client, which also comes in Netscape plug-in and ActiveX control versions. All three clients share nearly identical user interfaces, but the Java version has one significant limitation: While the ActiveX control and plug-in versions let users exchange files with each other while chatting, the Java client can't exchange files because of security limitations imposed by the browser execution environment. Java applets running inside of Navigator or Internet Explorer browsers cannot access the local file system...

...time than expected was required to implement certain features. "It's challenging to develop in Java because the development environment isn't as advanced as, say, Microsoft's Visual C++," says...

...have a component piece that lets you do colored text inside a window. For our Java client, we're going to have to write our own class libraries to do that."

Developer tools is where business is booming for Java these days. There are close to 40 Java IDEs available for Windows, Macintosh, OS/2, and Unix platforms, as well as at least...

...tools and many other specialized tools.

A list of these tools is available at [http:// www](http://www)

.cybercom.net/ frog/javaide. html .

No Programming Needed

Some of the tools require just a bit of programming skill--or...

...0, no programming skills at all. AppletAce lets users select from a pool of customizable Java applets. The AppletAce walks the user through a series of dialog boxes to select the look and feel of the applet.

At the end, the applet and the HTML code needed to execute it are automatically generated for the user. For example, you can...

...and how often you want the applet to update from the text file.

Parts for Java 1.0 is Objectshare's new Java Visual Programming Environment. It doesn't require a lot of programming knowledge to use, and it's also a great way to learn about the structure and limitations of Java classes. Parts for Java lets you lay out Java GUIs with drag-and-drop simplicity and sets up event handlers automatically.

Creating an easy-to-use development package gave Objectshare some insight into Java problems as well. "The Java tools are capable, but performance is still an issue," says Objectshare's Murphy. "There are...class libraries still need performance work." The AWT controls the display of GUI elements in Java .

Murphy says quality Java development tools are only now reaching fruition. The result is that end users will be...very long," he says.

Applets For Sale

Still, online "storefronts" ready to start selling serious Java applets are already popping up on the Web. Using the Internet as a delivery and...

...downloads and installs at the same time.

Online stores such as the Cafesoft Store ([http:// www .cafesoft.com/store](http://www.cafesoft.com/store)), Cup O' Joe Java Shop ([http:// www .cupojoe.com/](http://www.cupojoe.com/)), and Gamelan Direct (<http://direct.gamelan.com/>) are open for business. But a...

...tech merchants are sure that will change.

"We're looking at adding 15 to 20 Java -based commercial applications by the end of August, and 75 by the end of the...

...user-productivity applications. "I think it will be a year before we see strong intranet Java applications," she says.

In a marketing experiment, Earthweb is distributing its Java Chat client using a technique it calls transparent distribution. Web sites can host their own chats on Earthweb's chat server ([http:// chat .earthweb.com/](http://chat.earthweb.com/)) by licensing a customized piece of HTML code to put on their Web pages. That code downloads Earthweb's chat client and connects to a private chat for that Web site on Earthweb's chat server. The service is free for now and has more than 8,000 chats running on it, according to Earthweb. After Sept. 30, a subscription to the chat server will cost \$200 per year.

But the growing availability of Java -based products can't disguise the fact that Java development is still in the formative stages. While a year may seem like a long time, it's barely a start in the life of a programming language. Java will really take off once more standards are in place and there's a more stable environment for running Java applets.

That will happen eventually--it just hasn't yet.

A Sampling Of Java Products

Company: Objectshare Systems, [http:// www .objectshare.com](http://www.objectshare.com)

TICKER SYMBOLS: SUNW
TRADE NAMES: HotJava (Web browser)--Product development
FILE SEGMENT: CD File 275

ABSTRACT: Sun Microsystems is re-architecturing its HotJava Web browser with the intent of building a customizable hosting environment for Java -based applications. HotJava's first release will extend Web browser functions, creating an adaptable interface supportive of interactive content. Sun's JavaSoft division is developing HotJava as part of the company's two-part method for building and marketing Java applications. The SunSoft division will use HotJava as the interface for its Java Workshop development tool currently under design. HotJava development kits

will let developers tailor browsers to...

...and needs. HotJava's dynamic expendability allows automatic updates of the user interface with such Java applets as chat applications, word processors or spreadsheets downloaded from the Web.

TEXT:

Sun Microsystems Inc. is rearchitecting its HotJava World-Wide Web browser to create a customizable hosting environment for Java-based applications.

... for alpha release next month, the recrafted HotJava will extend the functions of the Web browser, creating an adaptable interface that supports interactive content, said Sun officials.

HotJava will differ drastically from the original, a standard Web browser that Sun put the breaks on last fall.

The new HotJava, being developed by Sun...

...JavaSoft division, is part of the company's two-pronged approach for creating and leveraging Java applications. Another division, SunSoft Inc., is set to debut next month its Java Workshop development tool, which will use HotJava as its interface.

"The underpinnings of HotJava are class libraries that we plan to extend and expand to add functionality to the browser," said Ruth Hennigar, general manager of languages and applications at JavaSoft, in Mountain View, Calif...

...enabling the dynamic extensibility within HotJava, the user interface can be automatically updated when a Java applet such as a word processor, chat application, or spreadsheet is downloaded over an Internet or intranet Web server.

Hennigar declined to...

...version of HotJava would be delivered, but she did say Sun will license the new browser technology to any of its Java licensees.

Java Workshop, due in April or May, is based on the browser metaphor, with each of its components appearing as a Web page. Some of the tools included in Java Workshop are a client-based just-in-time compiler, a source-code editor, a project manager, a portfolio manager, a debugger, an applet tester, and a source browser. Java Workshop also features an extensible tool bar.

"In HotJava there is no tool bar, but...

Netscape inks pact with Sun, Macromedia. (Netscape Communications Netscape Navigator, Sun Microsystems Java programming language)

ABSTRACT: Netscape Communications is planning to integrate Sun Microsystems' Java programming language in its Netscape Navigator 2.0 World Wide Web browser software. Netscape is also planning to include licensed multimedia capabilities from Macromedia Inc for the browser. Sun's Java is a portable, object-oriented programming language with similarities to the C++ programming language that is intended for Web programming. The current version of Netscape Navigator is limited to HTML document support, which is adequate for some uses but is not efficient for real-time data. HTML is also not very good for use with chat applications. Version 2.0 of Navigator will also include support for at least two other...

TEXT:

Netscape Communications Corp. announced last week that Version 2.0 of its World Wide Web browser software, Netscape Navigator, will incorporate Sun Microsystems Inc.'s Java programming language.

... Francisco, is also expected to unveil next month plans to license multimedia capabilities for its browser from Macromedia Inc.

Java is an object-oriented, portable programming language similar to C++ that is designed for Web programming. Applets created with Java are more dynamic than Hypertext Markup Language (HTML) documents, enabling users to include elements such as animation on Web pages. Java includes hooks to HTML so that applets can be displayed on standard HTML Web pages.

Patrick Naughton, vice president of technology for Starwave Corp., a Web publishing company, has been using Java applets to create real-time chat areas and sports ticker displays on his company's Web sites.

"HTML is okay for publishing documents," Naughton said, "but when you get into real-time statistics and scores, it's not very efficient."

Users with HTML-only browsers, such as the current versions of Netscape Navigator and NCSA Mosaic, must manually reload a document in order to refresh information on the screen.

Similarly, HTML is not well suited to chat applications. "Chat is miserable with HTML," Naughton said. "You have to constantly reload."

A Java applet, on the other hand, can offer chat capabilities similar to those available on America Online and other on-line services.

In addition to being compatible with HTML and Java, Netscape Navigator 2.0 will be compatible with at least two other types of document ...

...platforms, including Macintosh, Windows, Solaris, and others, according to Netscape.

Users interested in programming with Java can download free binary versions of the language for Solaris, Windows NT, and Windows 95 from <http://www.sun.com>. A Mac version will be available in June.

Currently, the only Java-compatible browser available is Sun's HotJava. Sun plans to license Java to other browser vendors, according to a company spokesman, although no agreements have been announced yet.

compiler, VRML support, and support for several full...

... Adds that it delivers sophisticated security facilities as well as a variety of controls for Java , ActiveX, and script downloading from foreign servers. However, says it has problems connecting to a...

...ABSTRACT: powerful multimedia PCs and faster connections are available. VRML is essentially a 3D equivalent to HTML and is already used for interactive gaming. A VRML page has boundaries defined by the author and can be viewed and manipulated with a specialized browser ; objects in the world can become hot links to other 'places' in it, other worlds or basic HTML pages. There are two versions of the VRML 2.0 specification: Moving Worlds, supported by...

... Net

The Virtual Reality Markup Language (VRML), which is basically a 3-D equivalent to HTML , is where three-dimensional gaming on the Web began. Although there are alternatives out there...

...page is actually its own little world with boundaries defined by the author. A VRML browser allows you to move into and through this world, see objects, manipulate their views, and...

...as hot links to other places in that world, other VRML worlds, or a basic HTML page.

While that may sound pretty nifty by itself, the real thrill comes when software...

...aren't 3-D. Time Warner, for example, offers a site called The Palace ([http:// www .thepalace.com](http://www.thepalace.com)), and while it resembles a 3-D environment, it's actually just a...

...software, AlphaWorld ushers users into a fairly convincing 3-D simulation environment, complete with independent chatting avatars. Because it doesn't rely on the limitations of VRML 2.0, AlphaWorld provides

...

...t view any of it without a proprietary client--even if you have a VRML browser .

As far as true 3-D goes, there's Black Sun Interactive; this company pioneered three-dimensional chatting environments on the Web using standard VRML. You'll need Black Sun's proprietary browser , CyberGate, but it's available as a free download. CyberGate connects with the Black Sun CyberHub, which is the software that adds interactive chat capabilities to regular VRML environments. Black Sun's approach is the way most industry observers...

...behind Moving Worlds are SGI, Netscape, and Sun; the latter has integrated it with the Java development environment. This integration enables Java Applets to create 3-D motion effects and include greater interactivity. Moving Worlds also supports...depending on where you are in relation to the train. (Cosmo, SGI's Moving Worlds browser and development environment, also has this capability, but it's one of the few that...

...VRML: You've either got to get a VRML plug-in or a whole separate browser. What's important here is more than just the client interface. Without a solid development...it claims that this solution is superior for adding 3-D animated images to standard HTML pages, as well as for creating VRML-type worlds.

OLiVR (OnLine Virtual Reality) is an...

...can check into the OLiVR Production Tool Kit on the company's Web site ([http:// www .olivr.com](http://www.olivr.com)). The commercial edition of this tool is expected to cost \$495, and the...

...cost about \$2,500.

ActiveX won't break the Web's commitment to open standards. (the Web browser feud between Microsoft and Netscape) (Hot Off the Wire)

(Internet/Web/Online Service Information) (Column)

...ABSTRACT: Microsoft and Netscape to move ActiveX to other platforms or to jointly support a better Java -based component model. Microsoft's intention in moving ActiveX to the Internet is to allow...

...downloaded from the Web on the fly. The controls can be written in Visual C++, Java or some other language, and developers can use several ActiveX controls to create applets, which gives ActiveX an advantage over plug-ins and pure Java applets, according to proponents. The threat of ActiveX may lead to development of a workable Java component model. Sun Microsystems' JavaSoft Div is developing the JavaBeans API, which the company claims...

... company's feud with Netscape. Remond's push for Internet Explorer 3.0 makes prior browser battles pale in comparison, and the ease with which Windows developers can use ActiveX technologies...

...furiously leapfrogging each other's capabilities. Consider Microsoft's nearly simultaneous announcement of support for Java and ActiveX in Internet Explorer 3.0, or Netscape's cross-platform stance on Java compared with its Navigator-specific LiveConnect initiative to tie together Java applets and proprietary plug-ins.

When it comes to open standards, both of these big...

...these wishes eventually--whether by moving ActiveX to other platforms, or by embracing some superior Java -based component model. Even if a single company ends up in the online-standards driver...

...inside Internet Explorer. To get a feel for what's out there, check out [http:// www .microsoft.com/activex/ controls](http://www.microsoft.com/activex/controls). If you prefer Navigator for Windows 95 or NT, you need Ncompass's ActiveX plug-in ([http:// www .ncompass.com](http://www.ncompass.com)).

ActiveX controls can be written in any language, including Visual C++ or Java itself. Proponents of ActiveX say one of its advantages over a plug-in or a pure Java applet is that developers can use multiple ActiveX controls to build applets: For instance, a developer can write an applet in Java that calls on a prefab ActiveX toolbar written for Windows. And since you can already...

...developers will make an easy transition to using ActiveX on the Web.

"(Previously,) you had Java applets, but no way for them to talk to each other," says Mike Templeton, president...

...to create sample ActiveX sites, such as The Nature Conservancy of Washington's site ([http:// www . tnc-washington.microsoft.com](http://www.tnc-washington.microsoft.com)).

"(Now) I can assemble a lot of ActiveX controls and glue...

...pieces are marketable and reusable in infinite ways.

Patrick Naughton of StarWave, a coauthor of Java who uses the language almost exclusively to publish and enliven his mega-popular ESPN SportsZone site ([http://espnnet. sportszone.com](http://espnnet.sportszone.com)), envisions ActiveX and Java working in harmony. "Java is a programming language in which you can write ActiveX objects," he says. "Or conversely, you can write code which uses ActiveX objects even if they're not written in Java. ActiveX is a perfect fit for what Java calls an interface object."

According to Naughton, "The worst thing Microsoft could have done is extend AWT (its Abstract Windowing Toolkit, a baseline set of graphical features for Java) to its logical conclusion, which is a bunch of Microsoft-centric classes. Instead, they created an automatic translation between Java and ActiveX objects. Developers have to make a conscious decision when to call ActiveX objects. (It) seems reasonable to me."

As Java purists point out, even if developers use Java to write ActiveX controls, currently those controls are platform-specific, because the architecture itself will...

...independent standards body, in the hope of solidifying a cross-platform solution.

Component Alternatives

Perhaps Java would have progressed independently of Microsoft, but thanks at least in part to the specter of ActiveX, the quest for a workable Java component model has kicked into high gear.

For instance, Sun's JavaSoft division was shooting...

...will run on all the component architectures," claims JavaSoft director of communications George Paolini. If Java prevails in the future, he adds, then developers can still use the same JavaBeans components...

...the Web. For example, Borland has announced that its forthcoming Latte visual development environment for Java will support both ActiveX and its own Java component model called the Borland Architecture for Java Applications (BAJA). Thanks to an agreement with JavaSoft, BAJA will lay the foundation for, and...

...Vermont, group product manager for Latte.

Security is another point of contention between ActiveX and Java-based solutions. Although Java is reportedly not flawless in this area, Java applets are generally downloaded and run without direct interaction with the operating system. Native Windows...

...to verify authentic ActiveX control providers.

Until JavaBeans or BAJA arrives, writing ActiveX controls in Java gives you the best of both worlds, says Nova Spivak, executive vice president of EarthWeb LLC, a Web consulting group whose Gamelan site (<http://www.gamelan.com>) serves as a central repository for Java applets and information. At press time, Gamelan launched an area for Java developers interested in writing ActiveX controls in Java.

To Be Had By All

Get two people in a chat room, and they'll have different ideas about when and how the Microsoft/ Netscape browser battle will end. StarWave's Naughton says, "If ActiveX becomes popular, (Netscape) will support it..."

...of today, a good Web site requires at least two versions for plain and fancy browser users. Furthermore, as he points out, content developers face not only a disparity between browser brands and system platforms, but also between different versions of the same browser.

Seen in this light, deciding whether to use ActiveX is no more insidious than choosing...

ABSTRACT: Netscape Navigator 3.0 and Microsoft Internet Explorer 3.0 now dominate the Web browser market. Navigator continues to dominate and define the market, but Explorer copies most of its...

...at \$49, but Explorer is usually available for free. The choice is difficult, but the browser that dominates the market will set the standards for the Web and determine how it...

TEXT:

Netscape Navigator 3.0 defines the browser . Microsoft Internet Explorer 3.0 clones its features and adds significant new technology. The winner...

... quickly come down to a duel. Of the 30 products covered in our last Web browser review ("Just Browsing," March 12, 1996), only two seem to matter anymore. Netscape Navigator remains...

...with Web browsing. It defines the Web's de facto standards for HyperText Markup Language (HTML), graphics, plug-ins, Java , and scripting. Almost all Web content that isn't vanilla is flavored for use with...

...mail and news.

Microsoft Internet Explorer 3.0 is the first version of Microsoft's browser that is truly competitive. The new Windows 95 and Windows NT releases not only match up well with Netscape's HTML , plug-ins, Java environment, and scripting standards; they also add support for ActiveX, a

technology for bringing Windows...

...Netscape's offerings in collaboration tools, multimedia, VRML, mail, and news. Microsoft is giving its browser and development tools away for free (Netscape Navigator sells for \$49) and has concluded aggressive...

...Explorer's market share hovers around 10 percent, but it is sure to grow.

Which browser should you use? The choice may seem trivial, but it has enormous implications. The company that dominates the browser market will dictate online standards and change the way we use the Web.

To help...

...user, the Webmaster, and the applications developer. We also look at the performance of each browser's HTML -and graphics-rendering engine, test each browser's collaboration tools, and compare the pair's respective mail and news features. A companion piece in this issue, "Java Speed Trials," gives detailed test results involving both browsers' Java environments.

Given that Internet Explorer comes out ahead in many of these comparisons, you may...

...superior product, however, and Netscape will have to work hard to keep its lead. Neither browser displays the kind of rock-solid stability we expect from other software, a legacy of...

...Netscape Navigator browsers. These features cover almost every aspect of content delivery.

Netscape extensions to HTML are widely used by page designers who want better formatting control and more display options than what vanilla HTML provides. Plug-ins, another important Netscape standard, give vendors a way to add almost any conceivable functionality to the Navigator browser --everything from streaming audio broadcasts to multimedia. JavaScript, Netscape's widely used scripting language, gives...

...programs into their pages. JavaScript can be used to manipulate programmable elements of the Netscape browser and the documents it displays.

With the exception of the Netscape HTML extensions, none of these technologies are true standards, and many are undocumented. These proprietary technologies...

...problems soon. But until then, it's hard to recommend Internet Explorer as your sole browser.

Internet Explorer also offers more than its share of original new technology. Most of this...

...already widely supported by third-party programming tools.

ActiveX competes with both plug-ins and Java in the sense that it can be downloaded on the fly to add rich functionality to the browser. It is also complementary with both in that ActiveX, Java, and plug-ins can be used within Internet Explorer as components to build total solutions...

...developers (in 32-bit Windows environments), this represents a very compelling approach.

Both browsers support Java applets and provide Java just-in-time (JIT) compilers for accelerating Java execution. This support cements Java's position as a central Web development tool. Overall, Microsoft's Java environment is more stable and far ...distance charges). They also offer whiteboard modules for free-form group brainstorming and text-based chat modules for real-time group discussions. Internet Explorer's collaboration suite also includes a powerful...

...competition between Microsoft and Netscape heats up, one certainty is that each vendor sees its browser as the key to implementing its vision for the Web. The contest to deliver the fastest, richest, most stable, and

most compatible browser can only benefit Web users.

Web Browser Features That Drive The Web

WEB NAVIGATION has only gotten easier, thanks to both browsers...

...out ahead on interface customization, while Netscape Navigator offers better options for low-bandwidth users.

HTML standards drive the look of the Web. Internet Explorer's adoption of the powerful Cascading...

...goes one step further with ActiveMovie, a native video playback module that handles multiple formats.

JAVA AND PLUG-INS remain the accepted standards for extending browser functionality. Both browsers support them, although Internet Explorer's plug-in support is less than...

...ActiveX technology is a powerful alternative.

COLLABORATION TOOLS, including an Internet telephone, remote whiteboard, and chat, are standard features of both browsers. Internet Explorer also offers application sharing, a powerful feature...

...the Internet than either one can alone. But if you're limited to a single browser, Netscape Navigator 3.0, the world's most popular and influential browser application, is still the best choice. Too many Web sites are optimized for Navigator plug...

...Explorer 3.0 has yet to go. Navigator's newly introduced LiveConnect standard, which integrates Java, JavaScript, and plug-ins, will be particularly attractive to Web developers who want to reach the largest possible audience on all platforms. Its topflight HTML-rendering performance and flexible options for low-bandwidth use deliver your pages more quickly at...

...the near future include support for rich style sheets, better stability and speed in its Java environment, and a substantially beefed-up collaboration suite.

Internet Explorer 3.0 will wake up...

...customizable user interface, easy navigation features, and powerful collaboration tools. Webmasters will appreciate its strong HTML implementation and welcome its pioneering adoption of HTML Cascading Style Sheets, a powerful feature based on a proposed W3C standard that brings basic...

...standard already widely supported by third-party control and tool vendors. Microsoft's integration of Java, JavaScript, and plug-ins into the ActiveX model is particularly impressive. Java developers will welcome Internet Explorer's well-tuned Java virtual machine, the fastest currently available.

The strikes against Internet Explorer are incompatibilities in its...

...deficiencies--and it has committed itself to doing so--Internet Explorer will be a tough browser to beat.

The true winner of the browser wars is the one who uses both Netscape Navigator 3.0 and Microsoft Internet

Our...

...Both browsers' interfaces stand up well to intense scrutiny.

Thanks to NCSA Mosaic, the Web browser pioneer, today's browsers have ingeniously simple interfaces and look more alike than different--at ...bookmarked pages since you last visited them. You can import bookmarks into Navigator from any HTML file, and you can insert separators between bookmark entries to help make long lists more...

...link on a page. For its part, Netscape has added backward/forward navigation to the browser pane's right-click menu, letting you jump from page to page without having to...

...levels. Self-imposed ratings may not provide an ideal solution, but you can configure the browser to block any site that has not been rated. More generally, Internet Explorer supports the...

...has been downloaded.

Both browsers give you the ability to view VRML files within the browser window. Microsoft's viewer is licensed from Intervista Corp., and Netscape acquired its Live3D VRML...installation (8MB) includes mail and news clients (980K), NetMeeting (2.3MB), ActiveMovie (600K), and the HTML layout control (1.43MB). The "typical" version includes mail and news only, and the minimum version includes only the browser. The VRML control is a separate download (1.9MB).

All these downloads are self-extracting...

...and that hasn't kept the company from producing a very usable and capable Windows browser, too.

Related article: Due This Fall: The Next Browser Generation

-Amarendra Singh

Even as they ship final versions of Navigator 3.0 and Explorer 3.0, Netscape and Microsoft are hard at work on their next browser releases. Both may be available in beta as early as this fall. Microsoft provided us ...

...let us work with an alpha version. Netscape revealed less about Galileo, its next-generation browser, but gave us some indications of its design goals.

Galileo

Netscape's plans for Galileo...

...will extend encryption and authentication to e-mail. Netscape also plans to bring full WYSIWYG HTML editing capability to both its mail and news clients--no surprise, given the HTML viewing support already implemented in the Navigator 3.0 versions. Netscape also plans to integrate real-time chat and audio collaboration directly into the browser. The aim is to produce a client that brings Notes-like functionality to corporate intranets and public servers on the Web.

On the HTML front, Netscape has said that it will support stylesheets but has not indicated which implementation...

...any contrary move by Netscape will cause confusion. We can also expect to see additional HTML tags aimed at both page layout and object embedding. To counter the functionality provided by Microsoft's ActiveX controls and VBScript, Netscape will deliver additional Java classes and JavaScript enhancements.

Explorer 4.0

Rather than greatly expand the functionality of the browser itself, Microsoft's Internet Explorer 4.0 aims to integrate Internet and local content into...

...is a fusion of Windows Explorer and Internet Explorer that will give you a unified HTML-based view of the Web, your local system, and your network. Every view you now...

...or your hard disk. A right-hand panel of the Web view can contain an HTML frame with text based on standard templates describing the contents of a particular directory. This...

...s Web view of the Control Panel. The frame on the right shows an associated HTML help text.

In Internet Explorer 4.0, Web sites will be integrated into the same ...and easy to use.

...announces: "This site best viewed with Netscape Navigator." And with Netscape driving the development of HTML extensions, such as tables and frames, faster than the standards committees could keep up--and...

...0, not Netscape Navigator 3.0, now leads in implementing the most interesting and significant HTML extensions, the capabilities Webmasters will use to build the next generation of cutting-edge sites...

...multiple independent regions. More significantly, it supports Cascading Style Sheets (CSS) Level 1, a new HTML draft standard that gives Web designers unprecedented control over the typography and presentation of their pages.

Surf in Style

HTML was created to define the structure of a document, not the details of its presentation...

...as "this is a headline" or "this is a hyperlink," but it was the Web browser that would decide how actually to render this information on a user's screen. Although HTML has been extended with attributes that allow more control over the appearance of Web pages...

...And while it's possible to select type size in gross increments using plain-vanilla HTML, only CSS (and thus only Internet Explorer) currently allows specification of type size down to...

...other measures. (Navigator 3.0 supports the FACE attribute for the FONT tag, a Microsoft HTML extension that allows control over the typeface that the browser uses.)

Beyond the advantage of greater control over presentation, CSS gives Web authors three important benefits:

- * Stylesheets allow style information to be kept in a separate file from the HTML document, making sites far easier to maintain. Multiple pages or even an entire site can...

...care, there's no need to design completely separate pages.

- * With stylesheets, you can use HTML to create display elements, such as headlines, that have traditionally required the use of bulky...

...flows text automatically into multiple columns, with adjustable column width and inter-column spacing. (Traditionally, HTML authors have simulated columns by using tables, an awkward solution.) Additionally, Netscape's SPACER tag...

...of pixels.

Frames and tables

...an incremental lead. Although the World Wide Web Consortium (W3C), which holds formal responsibility for HTML specifications, has not yet ratified a standard for tables, Internet Explorer is closer to supporting...minor plus. Both browsers support background sounds as well, each using its own syntax.

Basic HTML and Forms

Both Navigator and Internet Explorer feature strong compliance with HTML 2.0 standards, and perhaps not surprisingly, each browser also supports a handful of minor proprietary extensions. Internet Explorer can produce horizontal rules in...

...a built-in marquee control that can generate ticker tape-style scrolling text, as many Java applets do.

Netscape supports the BLINK tag, which simply causes text to flash--annoyingly, some...

...Feature for feature, Internet Explorer 3.0 has managed to match or exceed Navigator's HTML support in almost every significant area. While Netscape promises support for key enhancements, such as...

...are moving in fundamentally different directions.

-Thomas Mace

Web browsers have quickly evolved from simple HTML engines into full-fledged application platforms. The underpinnings of these platforms-- browser extension APIs, scripting languages, browser objects, and Java --let developers add rich custom functionality to what are otherwise lightweight, generic environments. In every area, from Web-based multimedia to intranet client/server applications development, the effect of the browser platform has been profound.

More than any other vendor, Netscape has pioneered the concept of the browser as an application host. The Netscape Navigator 3.0 platform consists of five basic elements: Navigator plug-ins, Java, JavaScript, Navigator browser objects, and LiveConnect, a set of browser services that can tie the other elements together.

Given Netscape's overwhelming market dominance, Microsoft...

...COM) that offers significant benefits to developers in 32-bit Windows environments.

Plug-ins and Java

The best-known Navigator extension standard is the Plug-in API, and some of the...

...While plug-ins have proved highly successful with developers, Netscape is moving toward Sun Microsystems' Java programming language as its core browser enhancement technology. Navigator 2.0 was the first major commercial browser to provide a Java virtual machine (VM), and Navigator 3.0 introduces a powerful Java enhancement, a just-in-time (JIT) compiler that compiles Java programs into faster native machine code on the fly.

Unlike plug-ins, Java applets are platform-independent. Java also offers a tight "sandbox" security model, letting the browser trap and disallow all memory- and file-access calls. Java has enormous potential for corporate developers who must deploy applications across multiple hardware and operating...

...Windows, Macintosh, and 11 Unix operating systems, is supremely well positioned as a cross-platform Java host.

Sadly, our tests of the Navigator Java VM (in the 32-bit Windows implementation) showed it to be buggy and on the slow side. In contrast, Internet Explorer's implementation of the Java VM and JIT is stable and fast. Interestingly, we found that neither browser is capable of supporting highly complex Java applications that employ with large data structures. (For a detailed look at all our Java test results, see "Java Speed Trials" in this issue.)

Scripting and browser objects

Netscape Navigator 3.0 provides a simple programming language and runtime environment called JavaScript, which despite its name bears almost no resemblance to Java. JavaScript code is transmitted to the browser in text form as part of the HTML page. You can use it to generate new HTML page elements on the fly, respond to user actions such as button clicks and check...offers comparable features, ease of use, and security.

One of the most powerful features of browser scripting languages is their use of browser objects, units of ready-made functionality that the browser exposes to the programmer. Navigator provides a comprehensive set of browser objects, many of which encapsulate the elements of HTML pages and forms. Text fields, buttons, radio buttons, and check boxes are among the most...

...encapsulate elements of Navigator itself. With a few annoying exceptions, Internet Explorer implements the Navigator browser objects and methods, and you work with them using either JScript or VBScript.

Internet Explorer...

...as image, hot-spot, marquee, multimedia, and other controls, which can be put on your HTML page and manipulated using JScript or VBScript. Internet Explorer itself is programmable through its ActiveX interfaces, so developers can build fully customized browser containers.

More importantly, the ActiveX environment lets you add third-party ActiveX controls to your...

...spreadsheets to 3-D world viewers, and these controls largely surpass anything currently available for Java. Generally, these controls are far easier to integrate into applications than plug-ins or Java applets. ActiveX controls not originally built for Web use may be quite large, however.

LiveConnect and Active Content

The biggest change that Navigator 3.0 brings to the Netscape browser platform is LiveConnect, a set of browser services for combining JavaScript, Java, plug-ins, and HTML objects into compound applications via a common object model, the Java Runtime Interface. LiveConnect programming is not trivial. Programmers must know the calling conventions of each...

...But LiveConnect is significant in allowing integration of robust elements written in C with the Java/JavaScript environment.

Internet Explorer provides a comparable environment, based on ActiveX, that unifies ActiveX controls, Java, plug-ins, HTML objects, and the two scripting languages. Under Internet Explorer, all Java applets are automatically wrapped in an ActiveX automation interface, making them full members of the...

...possible audience, your only real option today is the Netscape platform, with its plug-ins, Java, and JavaScript. Navigator's plug-in support is clearly more reliable than Internet Explorer's, while Internet Explorer offers a superior Java environment.

For corporate intranet applications, the choice is more complex. Neither browser has what it takes to support heavy-duty Java applications with large data structures. ActiveX and its related technologies are the most attractive option...

...only remaining option is to use Navigator plug-ins, possibly with the addition of lightweight Java applets and script. This somewhat retro solution is platform-dependent and lacks a clear upgrade path to Java or ActiveX. Today your choice of platform will involve compromises. We hope to see the next browser generation expand the options further.

PERFORMANCE TESTS

Netscape Navigator renders most HTML pages faster than Internet Explorer over both LAN and modem connections. On some real-world...

...Seltzer

It's no shutout, but overall, Netscape Navigator 3.0 is faster at rendering HTML pages than Microsoft's Internet Explorer 3.0. Navigator's lead is most noticeable in...

...was also much faster at reloading pages from its cache. Over a modem connection, each browser led in some tests, but usually by an insignificant margin. These differences will be even...

...to load the complete page, and the time needed to reload the page from the browser's cache. We cleared the cache and restarted the browser between each test.

Instead of testing with real-world Web pages (which, at network speeds ...

...of 13 highly stressful synthetic pages.

The Formatted Text and Links page is a 570K HTML file containing

text and a large number of hyperlinks. Internet Explorer took consistently longer than...

...Graphics and Formatted Text I test document contains 480K of .GIF images and 37K of HTML . Again, Internet Explorer was slower. Over a modem, Internet Explorer also had more trouble than...

...The Graphics and Formatted Text II test document is smaller and contains both .GIFs and HTML . The Very ...contains fewer graphics than the previous two tests. Navigator was generally faster in both.

Our HTML Controls page is extremely stressful: It contains 100 buttons, 100 radio buttons, 100 check boxes...

...display the first element in just over 1 second.

Once Internet Explorer had loaded the HTML Controls page, we noticed that free Windows 95 user resources had dropped to 34 percent...

...boost from its inclusion in both Microsoft Internet Explorer and Netscape Navigator as a standard browser feature. On the surface, Internet Explorer's NetMeeting and Navigator's CoolTalk look quite similar ...is a fairly new concept. The gamut of collaboration modules includes whiteboard products, text-based chat windows, and file-transfer utilities. Most impressive are application-sharing programs, which let several users...

...party throughout.

Next to consider are the collaborative functions provided. Both products provide whiteboard and chat , but only NetMeeting offers application sharing and file transfer. Using NetMeeting, we were able to...

...and markings separately, so you can move them around without erasing. Differences between the products' chat utilities were much less significant, although NetMeeting has a slight edge. Overall, NetMeeting sets high...

...MAIL AND NEWS

Internet mail and Usenet news clients aren't the highlights of either browser . But they're well integrated, functional, and likely to get better. Here's what they...

...the Internet's two most widely used applications, Netscape Navigator 2.0 was the first browser to integrate Internet mail (POP3/SMTP) and Usenet news (NNTP) clients. Now, better late than never, Internet Explorer 3.0 brings mail and news capabilities to Microsoft's browser .

Neither company's offerings will take the place of full-featured Internet mail and news...

...in Navigator 3.0, although not significantly enhanced beyond the previous version, exhibit an intriguing HTML -centric conception that is not yet strongly implemented. Microsoft's clients push the envelope less...

...posts for specific groups.

Rich mail

Both Microsoft and Netscape say their mail clients support HTML , a somewhat vague and confusing claim. Navigator's mail client can view HTML attachments in-line with the actual message, but it cannot directly create HTML mail. Both packages can turn an embedded URL into an active link. Internet Explorer's client supports rich text, which it can convert to a basic HTML equivalent, but you can't insert images or use advanced HTML features.

Ultimately, the mail and news offerings from both companies fall short of the mark, while holding out the promise of something better. We'd like to see full HTML creation added to the Navigator clients' HTML -viewing capability. And we'd like to see Internet Explorer's weak HTML creation and rendering facilities beefed up to cover the full range of formatting possibilities.

Cost: \$49 est. street price

Netscape Communications

(415) 937-3777

Isn't competition great? With giants Netscape and Microsoft openly battling to build the best Web browser , the rest of us only stand to come out ahead. In the latest round of...

...will present a serious challenge to Netscape in the future. For now, however, the top browser is still Netscape's--barely.

Refined and Reliable

Netscape had something to prove about reliability...

...communication, CoolTalk provides competent software and data-sharing (whiteboarding) tools, as well as a text- chat feature.

There are two significant advances in Navigator 3.0 that won't be readily...

...to most users, but they could improve the Internet experience. For example, Netscape reworked its Java and JavaScript support for greater reliability and wider compatibility. Even better, the company added an object-integration framework, called LiveConnect, that allows live objects such as Java applets, JavaScripts, and plug-ins to interact and synchronize with one another.

Navigator 3.0...

...Frame navigation, including support for the Back button within a frame. There are also new HTML tags like background colors for tables, and new attributes for embedding audio and video.

Serious...

...called version 4.0. That's no accident: Netscape has a significant lead in the browser world, with 75 percent market share, and Microsoft is the only company with any real...

...These enhancements add up to an extremely usable application--and usability is where Microsoft's browser skips ahead of Navigator.

Top Performer

Internet Explorer 3.0 brings a raft of features...the major features that Microsoft announced for Internet Explorer 3.0, such as support for Java and third-party plug-ins, weren't operational in the prerelease version we tested but...

...events, automatic event-launchers, and 3-D animation. ActiveX components will work in concert with Java applications. In theory ActiveX is a boon, but we'll reserve final judgment until we've seen it fully applied.

Close Choice

Until now Netscape's Navigator has dominated the browser market. With version 3.0 of Internet Explorer, however, Microsoft poses a serious threat to...

...content. If either LiveConnect or ActiveX builds serious support, people will want to use the browser that best supports the prevailing standard. But for now, the lead is still Netscape's.

How do I write a chat program? (Java Q&A) (Technology Tutorial) (Column) (Tutorial)

ABSTRACT: Chat programs enable simultaneous communication between users over a network. Text entered into a chat window is broadcast to all users logged on to the program. Earlier chat programs merely offered text, but newer versions are able to handle graphics. Chat programs generally have chat "rooms" for private communications. Java now makes it possible for chat programs to be hosted on a Web site and downloaded for use at the click...

...This eliminates the need to purchase and install a particular application. There are two basic chat architectures, peer-to-peer and client/server. Peer-to-peer programs do not require server programs, but

they are more difficult to implement. A client/server program needs a chat "server" application that functions as a routing center for chat sessions. The typical server application runs on a Unix Web server.

TEXT:

Chat programs allow people to communicate simultaneously across a network. Everything you type into a chat window is broadcast to the screens of all other users currently logged into the program. Chat programs originated with simple text-only capabilities (like the UNIX talk program) and have evolved into elaborate graphical environments. Unfortunately, everyone who wants to "chat" has had to obtain and install compatible chat programs. Java solves this problem by making it possible for chat programs to be hosted on a Web site and downloaded for execution with the click...

Chat programs are genuinely useful. Many chat programs allow discussions to be saved in a log file, as a record of points made or decisions reached (or jokes told). In short, chat programs are fun, but they can also be used to do real work. We've used a chat program to coordinate the activities of software developers separated by continents, and without adding a cent to our phone bill! (One relative of mine even uses a chat program to communicate with family in Rangoon.)

Real chat programs have features such as private chat "rooms," special identities, and so on. I'll ignore these embellishments to demonstrate the fundamental techniques.

The two basic chat architectures are peer-to-peer and client/server. A peer-to-peer design requires no server program, but is far more complex to implement. A client/server design requires a chat "server" program that serves as a switchboard or data-routing center for all ongoing chat sessions.

In this case, the server program runs on a UNIX Web server, since this is the typical configuration. The java chat program can then be hosted on a Web page on the server machine, with the chat program server running on the same machine. In essence, to make this work, you need:

- * A chat server program.
- * A Java chat client program.
- * An HTML page that loads the Java chat client program.

When someone goes to the HTML page that has the java chat client on it, the Java client is automatically fetched and run on the user's machine. The client program will then set up a communication session with the chat server program, which must be running all the time on the Web server. Once the session is established, users can then join any ongoing chat session.

Figure 1 illustrates the basic architecture of the system. All data (keystrokes) entered by...

...which then rebroadcasts the data to all clients. It is conceptually simple, and thanks to Java's streamlined communications-programming classes, is surprisingly straightforward to implement.

There is a hitch: Most Web servers still do not have java available on them, and Java is needed to run the server component if it, too, is in java. Therefore, we'll write the server in C++, and the client in Java. You can then put the client on a Web page: The Web server does not need to understand java to host Web pages with Java on them. The only thing that is required is that the client platform (typically Netscape) be able to run Java.

The Java Client

The chat client has three main classes: ServerChat, UserChat, and Chat, the last of which is an applet class that instantiates the other two. ServerChat, a...

...thread. This is good because its main job is to monitor the connection with the chat server program across the network and handle asynchronous incoming data from the server. UserChat, on...

...the communication line.

The most complex part of the program is the ServerChat class. Yet Java makes even this component easy to write compared to an equivalent

program in C. You...

...extends the TextArea class, so it inherits all of the behavior and features of a Java TextArea, which is a scrollable text window. Data retrieved from the server is displayed in...

...in which there is no data to read. It returns any retrieved data as a java string value.

The UserChat class also extends from TextArea. Thus, user input is entered into...

...insertText() on the UserChat window instead.

UserChat has one primary method, write(). it converts a java string to an equivalent stream of ASCII bytes, sending them to the server on the socket's output stream.

The Chat class has a constructor and three primary methods in addition to a main method for...

...The three methods are init(), make-Connection(), and handleEvent(). init() establishes a connection with the chat server program on the Web server by calling makeConnection(). if it succeeds, it then starts the ServerChat thread.

Java has built-in support for TCP/IP. This is implemented in the Socket and related...keystroke is inserted into the UserChat text area, and the keystroke is forwarded to the chat server program for rebroadcast to all other listening chat clients.

handleEvent() must have some special code to work around a bug in the Java toolkit. The period character (".") does not generate a KEY...

...RELEASE is generated.) A practical chat program will also handle backspacing (this one does not) and multiple-character events (the key...

...events will always bubble up to the applet that owns them.

The Server Program

Because Java has yet to be supported on most Web servers, we will provide a C++ implementation of a chat server program. (We used the gcc GNU C++ compiler.) The program must be running to...
...program on your own machine.

It is interesting to compare the C++ program with the java program. While they do different things, they are not too different in the functions they perform. However, the Java program is easier to read and understand.

The Applet HTML

To use the chat program, all you need to do is go to a Web page that hosts the client on a server running the chat server. Example 1 is the HTML code the Web page should contain. The (Text Chat Applet Would Run Here) is for those forlorn surfers who do not have a Java-capable browser. They will see this message, and dream about all the applets that they are missing. If you can run Java, you will see the chat applet with its two text area windows. For the browser to find the chat clients Java classes, the classes merely need be in the same directory on the server as the HTML page. Otherwise, you will have to include a codebase parameter in the applet tag specifying the directory or URL where the classes are to be found.

The Java client and C++ server source code is available electronically; see "Availability," page 3. Source code for a more advanced chat program, "Whiteboard," is available at ([http:// www.digitalfocus.com/ddj/code/](http://www.digitalfocus.com/ddj/code/)). It uses the same principles to implement a graphical whiteboard that many people across the Internet can draw on simultaneously.

```
< html ><head><title> Chat Client</title></head><body
bgcolor="#-ffffff">
  <applet code=" Chat .class" width=600 height=400> <h2>(Text Chat
Applet Would Run Here)</h2> </applet>
</body></ html >
```

...membership interact. These include secure e-mail, threaded discussion
forums, moderated threaded discussions, and live chat facilities. On the
cutting edge, CompuServe and MSN offer avatar-based live chat where users
move through a virtual 3-D world as animated figures.

While all of...

...shield members from the free-for-all flaming that characterizes Internet
news groups and IRC chat.

Connection Considerations

Even in the age of the Internet, you still need to consider some...and
support progressive bitmap rendering?

Community

We rate e-mail, group discussion facilities, real-time chat, and 3-D
avatar-based chat. Does the e-mail interface make it easy to perform
standard mail-management tasks, add...

...selection of special-interest groups, with threaded, easy-to-navigate
discussion. Is the real-time chat interface easy to use? Are chat

forums lively and is there a good selection of topics? Are unmonitored chat forums and 3-D avatar-based chat offered?

Content

How broad and deep are the special interest areas, proprietary libraries, and name...

...Internet access

We evaluate everything connected with Web and Internet access. We rate the supplied browser software and check whether third-party browsers and other Winsock tools are supported. Do you...

...the service and the Web? Can you post your own home page and are usable HTML authoring tools provided?

Suitability to Task: Product name

	Power	Ease
Connectivity and navigating	Poor	Poor...

...By Tom Giebel

Each online service in this roundup provides Internet access and a Web browser as part of the basic package. We found lots of variation in browser quality, access to newsgroups, supplied utilities such as news readers and FTP, and even in...

...the time this story appears, AOL and possibly Prodigy will also let you use any browser you wish. A flurry of recent browser deals will also mean new default browsers for AOL, CompuServe and possibly Prodigy by the ...

...toward Web-access tools that equal the state of the art.

America Online

The default browser supplied by America Online provides the least attractive Web-page rendering of all the online...

...other features commonplace elsewhere. Savvy users can download a Winsock to use a different Web browser, but everyone else will have to wait for the ink to dry on AOL's agreement with Microsoft to bundle Internet Explorer as the default browser. AOL does provide a sophisticated news reader and access to all Usenet newsgroups. Members can...

...an animated Gopher client. 28.8-Kbps access is widely available.

CompuServe

The Spy Mosaic browser supplied by CompuServe is a bit behind the times: its lack of support for tables means many Web pages will look odd. Thankfully you can use any Web browser instead. CompuServe has also recently announced a deal with Microsoft to make Internet Explorer its future bundled browser. Access numbers for 28.8-Kbps service are widely available.

Accessing a Web site from...

...Microsoft Network

Many MSN users will use Microsoft Internet Explorer 2.0 as their default browser although you can use any Winsock-compatible browser instead. Internet Explorer is fast, stable, and easy to use. Version 2.0 lacks some...

...this story appears Internet Explorer 3.0 may be available with state-of-the art Java, Netscape plug-in, and frame support. Internet Explorer is available as a free download from...

...95 or third-party telnet and FTP utilities.

Prodigy

Prodigy offers a fairly sophisticated Web browser which supports most of the advanced formatting features you're likely to see on better-designed Web pages. Tables, backgrounds, transparent .GIFs, and client-side image maps are supported. The browser is updated with new features frequently, and can be updated automatically when you log on...

...ll find on Prodigy is labeled "Prodigy created Web site" and is viewed through the browser . Unfortunately the Web browser closes and re-opens as you jump from site to site. Prodigy offers access to all the Usenet newsgroups.

WOW! from CompuServe

WOW!'s built-in browser is based on Microsoft Internet Explorer version 2.0, which supports tables, backgrounds, font attributes, and other advanced HTML features but not Java or plug-ins. CompuServe plans to offer upgrades to the browser with selected plug-ins already installed. Power users can add helper applications, but only if the application includes its own install feature. The browser 's setup and configuration menus are all hidden from the user.

WOW!'s non-standard...

...the Web. WOW! offers access to FTP sites and Usenet newsgroups only through the Web browser . Internet access is through CompuServe's physical infrastructure.

Related article: AOL's Global Network Navigator...

...a standard SpryNet account permits only up to 5MB on the server.

GNN's Web browser , GNNworks, supports HTML 2.0 and some 3.0 features. It has the usual navigation controls as well as a toolbar which integrates e-mail, newsgroup, chat , gopher, and FTP buttons. The e-mail client is easy to use and supports file...

...in the future.

Future GNN plans to lure new members include offering Netscape's Navigator browser and bundling more utilities, such as an Internet phone and a Virtual Places 3-D chat utility.--PB

...Web will be worth visiting.

Related article: Avatars and Virtual Worlds: The State of the Chat
Chatting with strangers online has been popular since the mainframe days. Avatar chats, which take...

...dimension. An avatar is an image that represents you in the virtual world where the chat takes place. As you explore the virtual landscape, you see other avatars and talk to...

...talk about.

There are two avatar chats available on the online services: MSN's V-Chat and CompuServe's WorldsAway. Other avatar chat packages have cropped up on the Internet, including WorldsChat and AlphaWorld, both from Worlds Inc. (AlphaWorld is in beta and did not run reliably enough to

test). Each chat world has its own character and strengths, but WorldsAway may hold your interest the longest.

V- Chat

V- Chat is basically an extension of the old text-based chat metaphor through avatars. It provides a 3-D environment that you can explore, and you...

...hear background sounds, but you can't interact with your environment in any way. V- Chat 's avatars can flirt, smile, wave, make silly gestures, and more. But they don't walk and move normally; they float.

Also, V- Chat forces you to use your MSN ID--which is often your first and last name--as your handle, which can spoil the fantasy. V- Chat 's best feature is the ability to create custom avatars and upload them to the server so others can see them. If you've enabled access to MSN's Adult Chat , you can even upload a risque avatar for yourself.

**Lack of standards proves no barrier to fledgling online 3-D
developers.(Worlds Chat , others offer virtual-reality Web sites)(Hot
Off The Wire) (Technology Information)**

...ABSTRACT: using Virtual Reality Markup Language (VRML) despite a lack of standards. A free multiuser 3D chat service called Worlds Chat already lets users select an avatar and join a group of other avatars in a chat room. Each represents a person logging into the server from somewhere in the world; users can teleport between chat rooms and wander into groups of participants. Bandwidth tends to be a problem, with occasional...
...but the system works smoothly over a LAN and even over 28.8Kbps modems. Worlds Chat currently uses proprietary technology but has its own VRML variation for multiuser support. Paper Software...

TEXT:

...that defined Web-based multimedia for me was the first time I logged onto Worlds Chat, a free 3-D multiuser chat service on the Web. Worlds Chat's realistic three-dimensional graphics hooked me the way the virtual landscapes and battlefields of...

Launched last spring, Worlds Chat greets you with a view of a 3-D room. Inanimate 3-D figurines of...

...these to be your avatar, and then join a group of other avatars in a chat room. Each avatar in the chat room represents a person who is logging onto the server from somewhere around the world...

...head. It's a unique way to meet people.

You can teleport between Worlds' several chat rooms, and then wander into groups of clustered participants to talk publicly or privately. While ...

...fellow players pointed out that they were using 28.8Kbps access quite happily.

While Worlds Chat currently uses a proprietary 3-D technology, it also has its own variation of VRML...

...come alive through links to other online multimedia enhancements, such as real-time video and Java scripts. This should spawn new forms of entertainment (and one must presume, advertising), and new...

...Graphics Software supports Silicon Graphics' Open Inventor file format directly in its Web Space Navigator browser. Though content developers get the benefit of additional features, callers can't view Open Inventor...

...online services about using its software to create a 3-D interface to that service's chat feature. Paper wouldn't name the service at press time.

"Worlds is trying to compete with the chat people, the online-service people, VR servers, and content providers," argues Paper's McCue. "We...

...we'll continue to create (our own) environments."

In addition to Worlds' forthcoming VRML Plus browser, which will work in conjunction with its current client software to view VRML content in...

...company says it will soon release an API for the non-VRML scheme of Worlds Chat and AlphaWorlds. This will allow third parties to create their own services and Worlds-like...

...is better. By the time you read this, Paper claims, Xpresso will let developers use Java and Microsoft's OCX to animate VRML scenes, and that you'll most likely get the Xpresso toolkit when you buy the final version of the WebFX browser. (The WebFX browser is due by the time you read this for about \$49).

By spring, Worlds says that its AlphaWorld service, a much-expanded takeoff on Worlds Chat that lets multiple users collaborate on building a 3-D city while socializing with each other, will enable content developers to create hotlinks to Java scripts and RealAudio files. At press time, the company revealed that it had agreements in...3-D acceleration features of its Edge board. The company also plans to bundle Worlds Chat with one of its boards.

Diamond believes that an increasing number of online 3-D...

...unaccelerated online 3-D can turn a no-fuss online user like me into a chat addict, then that may well turn out to be the understatement of the year.

Java animates the Web with interactive content.(Hot off the Wire)

(Technology Information) (Column)

Dec, 1995

WORD COUNT: 1444 LINE COUNT: 00115

DESCRIPTORS: Technology Development; World Wide Web; Programming Language ; New Technique

FILE SEGMENT: CD File 275

Java animates the Web with interactive content. (Hot off the Wire)
(Technology Information) (Column)

ABSTRACT: Sun Microsystems' new Java programming language promises to add new interactive content to the World Wide Web by letting...

...create new applications for networked environments called 'applets' that can be launched by a Web browser. Applets can be embedded in documents as bits of executable code which download and run...

...and tools for enhancing documents with video, audio and animation. Numerous commercial development tools for Java will soon emerge. StarWave Corp already uses Java exclusively when developing content for its online services and writes its back ends in Java as well. Netscape Communications will support Java applets in future versions of its Navigator browser, but expresses skepticism about whether the technology will become a standard. Microsoft is also interested...

TEXT:

Like many frustrated Web users, I have no time to waste configuring my browser with multiple external viewers just so I can see good online content. I often ignore...

...need to do heavy-duty troubleshooting. However, a new programming language from Sun Microsystems called Java has the potential to supplant cumbersome viewers, and it may enable content that only proprietary...

Java was designed from the ground up for developers who want to create new applications for...

...these applets can be embedded in documents as bits of executable code that any compatible browser can launch either in a standalone window or right in the browser itself. An interpreter in the browser actually compiles the downloaded "bytecodes" on the fly into a form that your operating system understands. And by all indications, Java is poised to take off as fast as the original Mosaic. First, Sun freely distributes...

...own HotJava demo browsers for Windows NT/95 and Solaris on its Web site([http:// java .sun.com](http://java.sun.com)) for no charge. More important, though, the audience for Java applets may expand exponentially this month if Netscape Communications comes through with its planned release...

...all of which include the appropriate interpreters. Quarterdeck Office Systems is following suit with a Java-compatible Windows 95 browser early next year.

Rather than static text content, pages with Java applets feature dynamic applications that update on the fly based on changing conditions or user selections. For example, a Java applet might generate charts and redraw them based on parameters you select, or provide animation, video, and audio to enhance a particular document. What's more, Java is designed to be modular and extensible, so that developers can distribute updates that automatically...

...they don't have to worry about end users installing software anymore," says Kim Polese, Java product manager at Sun.

Sun plans to continue free distribution of its own developers' kit...

...major companies such as Eastman Kodak and Mitsubishi that are using or planning on using Java, Polese says that "big Wall Street brokerage houses" are interested in the programming language for...

...were still of the fluff variety. But Web content developers, such as StarWave Corp. ([http:// www .starwave.com](http://www.starwave.com)), launched by Microsoft cofounder Paul Allen, have ambitious plans. For example, Java coauthor Peter Naughton, now vice president of new technology at StarWave, says the company currently uses Java exclusively when developing content for its

online services. One application that's already live on...

...numbers on the Web page automatically display the latest information without user intervention.

Though using Java on the Web demands no changes on the server side of the equation, StarWave also writes its back-end programs in Java, including the real-time chat system, links to credit-card companies for transactions, and database features. Besides claiming that Java is a "superior programming language" in general, Naughton points out advantages to using Java on the server side: "Unlike C++, if you've got 10 Java features on your server, and one crashes, the rest of the features stay up," he...

...of our client applications take advantage of the fact that our back end is in Java as well. For example, our forthcoming chat system is compatible with existing forms-based chat, although if you've got a Java interpreter in your browser, it works a lot better."

When it comes to security, seeing is the only path...

...press time), ensures that an enterprising hacker can't get away with posting a malignant Java program called Free Utility that wipes out your hard drive's boot sector when you click on it.

Naughton downplays the role of public-key encryption, giving the Java architecture credit for its resistance to tampering. "Java programs don't have free reign on your system," he says. "They work in the environment defined for Java, and the interpreter checks the code to make sure it conforms to those constraints."

With security in place, Java also raises the stakes for developers who want to make applications that can be modified over time. That's because Java will not only execute code on the fly, but also absorb software updates and new features into Java-based applications already running on your system.

"We may use Java to distribute software updates throughout our network," says David Linthicum, technical manager at Electronic Data...

...keep track of who's updated their code."

If you're a believer like Naughton, Java could and should replace C++ and Visual Basic for all software development. "Java is the language and platform for things that need to evolve over time," he says. "Within two years, all CD-ROMs will have networked components, and they can have a Java interpreter that compiles new fixes and components."

Indeed, Microsoft is already in the planning stages...

...its popular Visual Basic language. Perhaps not surprisingly, Microsoft isn't publicly tooting Sun's Java horn.

"We're kind of skeptical about whether or not Java actually will become ...says Alec Saunders, product manager of Microsoft Plus and the company's Internet Explorer Web browser. "We don't have any plans to incorporate Java into Internet Explorer, which is not to say we won't put automation into the..."

...hand, John Middlehouse, Netscape's founding engineer, claims, "We will support OLE and such, but Java is designed from the ground up to be much more powerful and much more efficient."

"Microsoft is very interested in Java these days, but it's highly political," Naughton claims, referring to Microsoft's lack of...

...even if you have this big OLE-driven system, and part of it is a Java OLE control, then maybe you should have one big Java OLE control and do everything else within the Java app. It becomes an object within an object model."

Whatever the significance for programmers, Java is a clear improvement for the Web, and this fact isn't lost on online service providers. For example, Prodigy, which converted all its online screens to HTML format this year, says it will add a Java interpreter to its Web

browser at minimum, though it wouldn't specify a time frame. More to the point, product...

...more efficiently update the client software for the Web's dial-up service.

One thing Java has on its side is that unlike other technologies designed to do similar automatic updates on distributed systems, such as General Magic's Telescript intelligent agent technology for PDAs, Java has the opportunity to prove itself on a platform that's already popular. In fact, the Web may need Java or something like it as much as Java needs the Web.

LEAD PARAGRAPH: Dec. 2-- Chat rooms, as a concept, are remarkable.

TEXT: Dec. 2-- Chat rooms, as a concept, are remarkable.

Through their computers, dozens of people at a time...

...to gather lots of people in one place for important discussions.

Of course, anyone cruising chat rooms knows they're rarely used in that way.

The bulk of chat room encounters go something like this:

Dude: Yeah, I'm 6-feet-4, blond, blue...

...night?

(Long pause)

Dude: Uh, gotta go.

Unfortunately, such foolishness has not only clogged the chat rooms on the on-line services, where new folks regularly rack up huge monthly bills because they get carried away with the power of chat, but it has also drifted to the IRC (Internet Relay Chat) channels that used to be more focused.

That's what has led sites -- from Salon ([http:// www .salon1999.com](http://www.salon1999.com)) to ESPNNet ([http:// espnnet.sportszone.com](http://espnnet.sportszone.com)) to Parent Soup ([http:// www .parentsoup.com](http://www.parentsoup.com)) -- to launch their own chat areas at no charge to their members.

And HotWired Inc. ([http:// www .hotwired.com](http://www.hotwired.com)) has taken the next step with Talk.com ([http:// www .talk.com](http://www.talk.com)). The site, which launched in October, will likely lure even more folks away...

...new level -- with live discussions."

Talk.com essentially works like AOL's easy-to-use chat rooms -- as long as you have a Java-ready browser. You log in, you find a room with a topic of interest you like and...

...in the advertisers.

Talk.com features ads on a time-based rotation because people in chat rooms don't move from page to page looking at ads, which is what the ...

...sense of community," said Anuff. "This helps us do that."

Other sites like Firefly ([http:// www .firefly.com](http://www.firefly.com)), from Cambridge, Mass.-based Agents Inc., use the chat areas to strengthen the ties

between their members.

"You can develop ideas by talking with...

...also offer members ways to keep their identities hidden.

While sites like The Palace ([http:// www .thepalace.com](http://www.thepalace.com)) offer users ways to see each other and make their identities more easily known, some sites realize anonymity can also be freeing.

Anonymous members often chat more freely, especially those who are worried about being stalked on-line or worried about...

...in search engines is to use more than one at a time.

Search.com ([http:// www .search.com](http://www.search.com)) collects about 250 search engines in one place, although it takes some tweaking...

...our search engine of choice," writes Shidler.

The Goodyear Tire & Rubber Co. Web site ([http:// www .goodyear.com](http://www.goodyear.com)) continues to garner accolades. In this month's Yahoo! Internet Life magazine, the...

BROWSERS: THE RACE HEATS UP: Microsoft's new Internet Explorer will give Netscape a run for its money

July 1, 1996

Word Count: 627 *Full text available in Formats 5, 7 and 9*

COMPANY NAMES (DIALOG GENERATED): America Online ; Both Netscape Communications ; CompuServe ; Microsoft ; Sun Microsystems

TEXT:

Not too long ago, a browser was just someone who hung around a bookstore without buying anything. Now, thanks to the World Wide Web and the explosion of Web technology on corporate networks, the browser has turned into a pretty indispensable piece of software.

Both Netscape Communications and Microsoft are...

...tools. (Test versions of the browsers are available for downloading from home.netscape.com and [www .microsoft.com/ie/.](http://www.microsoft.com/ie/))

Netscape Navigator 3.0, with commercial release scheduled for July, is an...

... summer, is a huge leap from Microsoft's mediocre current model. This is the first browser that gives Netscape real competition.

GROUP EFFORT. The most notable new feature in Navigator is CoolTalk, which allows voice conversations, typed chat, and the sharing of "white-board" screens. These screens let people take turns making changes...

... identifies you to servers, a crucial step for business transactions on the Net. The new browser runs faster, has improved multimedia abilities, and is much more efficient at running network applications written in Sun Microsystems' Java language.

Microsoft's current Internet Explorer 2.0 lacks many of the features of even...

... allowing you to customize, resize, and move tool bars and menus. In addition to voice, chat, and white-board sharing, Microsoft NetMeeting lets two or more people on the Internet work...

...undesirable sites.

I have to reserve judgment on several Internet Explorer features, including support for Java and the digital signatures security feature,

because they won't work until a second test version...

... technology called ActiveX does work, and it is likely to pose a major challenge to Java, at least in the Windows world.

JAVA BANDWAGON. The stage is now set for a major battle for your desktop between Netscape...

... see happening," says product manager Eckart Walther. "In reality, the whole market is moving toward Java."

Microsoft, which is giving its browser away, is appealing directly to end users, whether in the home or in Corporate America. It also has struck deals to make its latest Internet Explorer the browser of choice on both America Online and CompuServe. And by the end of the year...

Ichat offers Netscape plug-in for truly interactive web integrated chat sessions

PUBL DATE: 960307

DATELINE: San Francisco, CA, US, Pacific

WORD COUNT: 652

COMPANY NAMES: Ichat Inc, Austin, TX, US, SIC:7372,

CLASSIFICATION CODES: 8302 (Software and computer services); 7500 (Product planning & development)

DESCRIPTORS: Software industry; Product introduction

Ichat offers Netscape plug-in for truly interactive web integrated chat sessions

TEXT:

...first plug-in to enable World Wide Web visitors access to real-time, Web-integrated chat sessions. The Netscape Navigator 2.0 plug-in architecture allows third-party developers to embed their applications directly into Netscape, enabling seamless access from within a Web page. Chat systems allow Internet users to interact directly with one another.

Generally, the Web is a static medium permitting the one-way transfer of data, but with better integration of chat on the Web, its status is about to change. Chat is valuable because it brings people together electronically in a way that makes it easy to communicate with one another. Unlike other forms of chat, Web-integrated chat enhances a company's Web presence by delivering to visitors the opportunity to interact with others in real-time, without having to launch a separate application to enter chat rooms. The addition of Web-integrated chat enables the Web site to develop a sense of community among its visitors who already...

...a common interest in the content of the site.

The ichat Plug-in seamlessly integrates chat with Web pages, delivering visitors the best of both worlds -- the ability to view Web...

... with others viewing the same Web page. Once installed on the Netscape Navigator 2.0 Browser, the ichat plug-in will automatically launch when visitors connect to a Web site that...

... The ichat Plug-in also allows users to click on hyperlinks to the Internet Relay Chat (IRC), the most popular form of chat currently available on the Internet. The ichat Plug-in is the first Web-based system ...

... provides a powerful solution for information delivery, including the integration of graphics, text, forms and Java," said Andrew Busey, president of ichat. "At ichat, we are introducing real-time Web-integrated chat to help transform the evolving architecture of the Web, enabling organizations to turn their Web...

... an existing Web site. The product extends that site's capabilities by adding real-time chat functionality and the concept of virtual space. The ichat Interactive Server can be used to...

... to move through and interact with other objects, as well as view other Web pages.

Chat is a popular element of the major online services. When a chat room is embedded into a Web site it is fully integrated with a Web server, enabling visitors to build chat rooms with hyperlinks to their home pages or to create Web pages that are tied to specific pieces of the chat room.

The ichat Interactive Server, in conjunction with ichat's Plug-In for Netscape, makes it possible to run a real-time chat system and to integrate that chat system with a Web site. Visitors can download the ichat Plug-in for Netscape on...

... privately held company whose mission is to provide a user-friendly channel for accessing Internet chat resources and provide tools for creating robust and professional chat servers that can be integrated with the World Wide Web. For more information on the company and its products, visit the ichat Web site at [http:// www .ichat.com](http://www.ichat.com).

WEBMASTER INC: WebMaster releases Internet relay chat server for Windows
TEXT:

15 August 1996-WEBMASTER INC: WebMaster releases Internet relay chat
server for Windows (C)1994-96 M2 COMMUNICATIONS LTD

... 120896

WebMaster Inc. today announced the availability of ConferenceRoom, the first fully functional Internet Relay Chat (IRC) server for windows NT and Windows 95.

Written specifically to take advantage of the...

...performance of Microsoft Windows, ConferenceRoom allows general computer users to add standards-compliant real-time chat on their web page. It also has greater reliability, performance, and scalability than UNIX. chat servers.

Integrated with the Web through a built-in theme-based web server, ConferenceRoom differentiates itself from other web-based chat systems by allowing the seamless addition of real-time chat to an existing web page. Using a Java -enabled web browser , a first time visitor is no longer required to download a proprietary chat client. The web server interface provides features such as one to one and "party-line" chats , functionality for highly populated events, and the ability to create custom chat web themes in addition to those provided - features previously only found in the proprietary interfaces...

...our clients."

ConferenceRoom also functions as a universal client. It can be accessed through any Java -enabled browser such as Microsoft's Internet Explorer.3.0 and Netscape Navigator 2.0 and above...

...ConferenceRoom. is perfect for support, distance learning applications, virtual meetings, or as a place to chat with friends. It's ease of use offers companies the ability to run cost-effective conferencing, support, and training operations globally.

"With ConferenceRoom, it's now so easy to integrate chat into your web site, there's no reason not to do it," said Mark Owen...

...president of marketing for WebMaster, Inc. "From virtual meetings to distance learning, the range of chat applications has made its implementation a necessity rather an option. The only problem I've...

...web, providing greater ease of use and functionality, including a web server interface with a Java -based client. ConferenceRoom is written to the same specifications as UNIX IRC servers. This ensures...

...products for web site development and administration. Products include solutions for network news, Internet relay chat and Internet commerce.

STRATUS: InterAct '96 showcases net technologies in first virtual tradeshow for distributed computing

April 10, 1996

Word Count: 874

PUBLISHER NAME: M2 Communications

INDUSTRY NAMES: BUSN (Any type of business); INTL (Business, International)

RDATE:090496

* InterAct '96 delivers technology firsts through integration of HTML , ShockWave, Java , VRML and Avatars

MARLBORO, MA-- InterAct '96, the first virtual trade show for distributed computing, is preparing to unveil the world's most innovative integration of hypertext markup language (HTML), Java , and virtual reality markup language (VRML) programming available on the World Wide Web. Developed by programmers specializing in HTML , Java , and VRML, InterAct '96 is the only Web site to showcase a combination of 3-D VRML chat rooms, streamed audio and video, and innovative Java applets. InterAct '96 promises to deliver the most unique technology trade show experience to all attendees, vendors, and press.

"We have tested our technology with leading Java developers, HTML encoders, and VRML programmers. This is the most innovative integration of these technologies available on...

...virtual conference gates, InterAct '96 attendees will choose their trade show experience as a standard HTML trade show or as a Virtual VRML trade show. For access to the HTML trade show, the attendees can access the World Wide Web via any Web browser . The trade show experience improves, however, if the user's browser has the capacity for multimedia applications. InterAct '96 trade show content exists in a number of formats including: Java , Shockwave, streamed audio/video, and net-phone.

The VRML trade show booths are visible to anyone with a VRML browser . A VRML browser allows users to enter the 3-D trade show floor and participate in virtual chat sessions through Java chat rooms. In addition, interactive avatars are available through Black Sun Inc.'s CyberGate technology. Avatars...

...for InterAct '96 can be obtained in the toolbox section of the home

page: [http:// www .interact96.com](http://www.interact96.com). Users who do not wish to experience the speaking presentations through audio or video can obtain text-only transcripts of the speeches, and participate in on-line chat sessions that occur at pre-scheduled times during the show.

Chats

There are three main types of discussion rooms available for InterAct '96 chat sessions: discussion rooms for technical topics, partner chat rooms that are linked to the partners' booths, and Q&A speaker sessions that follow the presentations. The chat sessions are available through a combination of technologies, depending upon the users capabilities. All of ...

...and can be attended by anyone who registers at the InterAct '96 Web site: [http:// www .interact96.com](http://www.interact96.com). The conference will provide exciting, interactive access to a wide variety of activities...

...times to conference attendees in video, audio and text formats at the conference site: [http:// www .interact96.com](http://www.interact96.com), until May 15.

Keynote

Keynoter Mike Slade (CEO, Starwave Corporation) offered a low-key chat on the evolution of the Internet and World Wide Web. He described the Web as...

...However, more companies have begun to offer higher bandwidth access and new programming tools like Java to make Web pages more dynamic.

Slade commented on the three existing ways to make...

...the most successful CD-ROMs are games, and the most popular online areas are the "chat" rooms. He sees, therefore, great potential for combining the two to offer real-time collaborative...

...moving toward a time of constant new releases of software."

Colligan opined that Sun's Java is a very important language, but it does not yet provide an environment for rigorous corporate applications. He described Macromedia Shockwave, a similar application for non-programmers, while Java is for programmers. Doerr noted that Java is a "first-rate new language" that has achieved brand-name recognition in excess of...

SUPERSCAPE: Superscape and Black Sun Interactive deliver community on the Virtual World Wide Web

March 13, 1996

Word Count: 880

PUBLISHER NAME: M2 Communications

INDUSTRY NAMES: BUSN (Any type of business); INTL (Business, International)

RDATE:120397

* New collaboration brings avatars and chat to global network of 3D pages on the Virtual World Wide Web (VWWW)
Superscape, a...

...Sun Interactive, a leading online community company, have joined together to integrate the Superscape Viscape browser with Black Sun's online community functionality. A new Java interface has been added to the Viscape browser that links with Black Sun Interactive's client software, Passport, to enable chat and interaction on the Virtual World Wide Web, the global network of over two hundred...

...Black Sun and Superscape unites the benefits of community with an extremely fast 3D Web browser that is available for both Netscape Navigator and Internet Explorer," said Franz Buchenberger, CEO of...

...World Wide Web benefit from the integration of Black Sun's community and collaboration features - Chat and interaction are critical elements for leveraging content and building community among the interconnected network ...

...benefits of Black Sun's community functionality that will be available through Superscape's Viscape browser include the ability to choose your own 3D representation, or "avatar", and to view and interact with other users as avatars; communicate with others through text-based chat in both group and one-to-one interactions; and exchange personally tailored business cards, "cybercards..."

...and NT platforms.

The Black Sun Passport plug-in is fully integrated with the Viscape browser to run on a user's PC. Visitors to online communities on the Virtual World Wide Web will see the Viscape browser window within the Passport interface. Users can navigate using the familiar Viscape browser, while using the Passport interface to communicate and interact with other users.

Availability The Viscape browser with integrated Black Sun Passport features is available for download on March 12, 1997 from the Superscape Web site at <http://www.superscape.com>. For more information on the Black Sun Community Server, please visit <http://www.blacksun.com>.

Technical Requirements Platforms supported by the Superscape Viscape browser include Windows 3.11, Windows 95 and NT. The Superscape VRT authoring tools are available...

...is the company's award winning authoring software. Viscape, the world's fastest 3D web browser, is an ActiveX control for Microsoft Internet Explorer and a plug-in for Netscape Navigator...

...an emerging standard for online communities, is fully compliant with existing open standards such as HTML, VRML, and Java. Founded in 1995, Black Sun delivers a extensible and scaleable platform for running online communities...

ICHAT: iCHAT offers Netscape plug-in for truly interactive Web integrated chat sessions

TEXT:

...PRESSWIRE-12 March 1996-ICHAT: iCHAT offers Netscape plug-in for truly interactive Web integrated chat sessions (C)1994-96 M2 COMMUNICATIONS LTD
RDATE:110396

* First vendor to deliver real-time Web integrated chat
SAN FRANCISCO, CA -- ichtat, Inc., an Austin, Texas-based software developer, announced at the Netscape...

...first plug-in to enable World Wide Web visitors access to real-time, Web-integrated chat sessions. The Netscape Navigator 2.0 plug-in architecture allows third-party developers to embed their applications directly into Netscape, enabling seamless access from within a Web page. Chat systems allow Internet users to interact directly with one another.

Generally, the Web is a static medium permitting the one-way transfer of data, but with better integration of chat on the Web, its status is about to change. Chat is valuable because it brings people together electronically in a way that makes it easy to communicate with one another. Unlike other forms of chat, Web-integrated chat enhances a company's Web presence by delivering to visitors the opportunity to interact with others in real-time, without having to launch a separate application to enter chat rooms. The addition of Web-integrated chat enables the Web site to develop a sense of...

...a common interest in the content of the site.

The ichtat Plug-in seamlessly integrates chat with Web pages, delivering visitors the best of both worlds -the ability to view Web...

...with others viewing the same Web page. Once installed on the Netscape Navigator 2.0 Browser, the ichtat Plug-in will automatically launch when visitors connect to a Web site that...

...The ichtat Plug-in also allows users to click on hyperlinks to the Internet Relay Chat (IRC), the most popular form of chat currently available on the Internet. The ichtat Plug-in is the first Web-based system ...

...provides a powerful solution for information delivery, including the integration of graphics, text, forms and Java," said Andrew Busey, president of ichtat. "At ichtat, we are introducing real-time Web-integrated chat to help transform the evolving architecture of the Web, enabling organizations to turn their Web...

...with an existing Web site. The product extends that site's capabilities by adding real-time chat functionality and the concept of virtual space. The ichtat Interactive Server can be used to...

...to move through and interact with other objects, as well as view other Web pages.

Chat is a popular element of the major online services. When a chat room is embedded into a Web site it is fully integrated with a Web server, enabling visitors to build chat rooms with hyperlinks to their home pages or to create Web pages that are tied to specific pieces of the chat room. The ichtat Interactive Server, in conjunction with ichtat's Plug-In for Netscape, makes it possible to run a real-time chat system and to integrate that chat system with a Web site. Visitors can download the ichtat Plug-in for Netscape on...

...privately held company whose mission is to provide a user-friendly channel for accessing Internet chat resources and provide tools for creating robust and professional chat servers that can be integrated with the World Wide Web. For more information on the company and its products, visit the ichtat Web site at <http://www.ichtat.com>.

... the full power of the Internet, by providing full-featured client applications including a Web browser, USENet News reader, FTP (File Transfer Protocol) file transfer, Internet chatting sessions (IRC - Internet Relay Chat), e-mail via Microsoft Exchange (the built-in e-mail client software in Windows 95...

...Image and Zip managers with built-in Norton AntiVirus.
Development Tools

The company licensed the Java Internet programming language technology from Sun Microsystems and released the first Java development environment for Windows 95 and NT, code named "Cafe". Cafe is Symantec's fully integrated development environment which seamlessly integrates Sun's Java Development Kit (JDK) for the creation of Java applets for Internet web pages. Cafe provides Java developers with class and project management capabilities within a graphical development environment. Developers who have licensed Symantec C++ can download Cafe from Symantec's web site at www.symantec.com.

Java, developed by Sun, is an object-oriented programming language that operates independent of any particular operating system or microprocessor. Java programs -- called applets -- can be transmitted over a network and run on any client, providing the multimedia richness of a CD-ROM over corporate networks and the Internet. Java has been widely

hailed by programmers because it eliminates the need to port applications, and...

State Of The Applet - There are still no serious Java business apps

TEXT:

Seven months after sun Microsystems released the Java Software Development Kit-and at least one year after Java was proclaimed as one of the hottest technologies of the decade-there still are no serious Java business applications. What we have instead is a Java industry that is bursting at the seams with developer tools. But there are no reliable places to run applets (the name for applications written in Java that are executed in a Web browser), nor are there enough standards in place to create serious applets for business users.

... database connectivity," says Thomas Murphy, product line manager for Objectshare Inc., who notes that the Java Data Base Connectivity (JDBC) specification won't become a standard until later this year.

"There...

...But a lack of standards isn't the only problem. Most businesses expect

to deploy Java applets by having users download and execute the applets in a Java-capable browser. But developers have found that the most popular Java-capable browser, Netscape's Navigator 2.0, suffers from performance and reliability problems when executing Java applets.

"Navigator 2.0 works fairly well with little applets that animate things on your...

...that are broken." Cadis, whose customers include Hitachi, National Semiconductor, and Phillips, has implemented a Java client for Krakatoa, its client-server content management and search engine. But Cadis has had problems with its client because of difficulties with the Java Virtual Machine currently implemented in browsers such as Navigator 2.0.

"In Navigator 3.0...

...correct operation of the GUI environment, JIT (just in time) compilers, faster download time, persistent Java applets, and caching that works properly," says Pendleton.

Cadis has developed an alternative Web-based front-end using a combination of JavaScript and HTML frames that is faster and more reliable than the Java applet version. For example, downloading a Java applet using Navigator 2.0 takes several minutes over slow (less than 512-Kbps) links...

...because Navigator 2.0 makes a time-consuming connection to the server to download each Java class and then checks to make sure the date and time stamps are correct on the other downloaded classes.

In Navigator 3.0, developers can compress all of the Java classes into a single file to greatly reduce download time for applets. But for now, "the Java front end makes the most sense in an intranet situation where you have a higher...

...Chris Beal, chief technology officer at Cadis. "But we anticipate Netscape and Microsoft will make Java applets download faster."

The new JIT Java compilers, which have been developed by several vendors and are built into Navigator, Microsoft's Internet Explorer 3.0, and several Java Integrated Development Environments (IDEs), will speed up the sluggish execution of applets by translating Java byte codes directly into native machine code. Navigator 2.0 and Sun's Java Development Kit use a slower interpreted method of executing Java applets.

Security Limits

Performance wasn't the issue at Ichat Inc., but security limitations and development tools made a difference. Ichat recently released a Java applet version of its chat client, which also comes in Netscape plug-in and ActiveX control versions. All three clients share nearly identical user interfaces, but the Java version has one significant limitation: While the ActiveX control and plug-in versions let users exchange files with each other while chatting, the Java client can't exchange files because of security limitations imposed by the browser execution environment. Java applets running inside of Navigator or Internet Explorer browsers cannot access the local file system...

...time than expected was required to implement certain features. "It's challenging to develop in Java because the development environment isn't as advanced as, say, Microsoft's Visual C++," says...

...have a component piece that lets you do colored text inside a window. For our Java client, we're going to have to write our own class libraries to do that."

Developer tools is where business is booming for Java these days. There are close to 40 Java IDEs available for Windows, Macintosh, OS/2, and Unix platforms, as well as at least...

...tools and many other specialized tools.

A list of these tools is available at [http:// www .cybercom.net/~frog/javaide. html](http://www.cybercom.net/~frog/javaide.html) .

No Programming Needed

Some of the tools require just a bit of programming skill-or...

...0, no programming skills at all. AppletAce lets users select from a pool of customizable Java applets. The AppletAce walks the user through a series of dialog boxes to select the look and feel of the applet.

At the end, the applet and the HTML code needed to execute it are automatically generated for the user. For example, you can...

...and how often you want the applet to update from the text file.

Parts for Java 1.0 is Objectshare's new Java Visual Programming Environment. It doesn't require a lot of programming knowledge to use , and it's also a great way to learn about the structure and limitations of Java classes. Parts for Java lets you lay out Java GUIs with drag-and-drop simplicity and sets up event handlers automatically.

Creating an easy-to-use development package gave Objectshare some insight into Java problems as well. "The Java tools are capable, but performance is still an issue," says Objectshare's Murphy. "There are...

...class libraries still need performance work." The AWT controls the display of GUI elements in Java .

Murphy says quality Java development tools are only now reaching fruition. The result is that end users will be...very long," he says.

Applets For Sale

Still, online "storefronts" ready to start selling serious Java applets are already popping up on the Web. Using the Internet as a delivery and...

...downloads and installs at the same time.

Online stores such as the Cafesoft Store ([http:// www .cafesoft.com/store](http://www.cafesoft.com/store)), Cup O' Joe Java Shop ([http:// www .cupojoe.com/](http://www.cupojoe.com/)), and Gamelan Direct (<http://direct.gamelan.com/>) are open for business. But a...

...tech merchants are sure that will change.

"We're looking at adding 15 to 20 Java -based commercial applications by the end of August, and 75 by the end of the...

...user-productivity applications. "I think it will be a year before we see strong intranet Java applications," she says.

In a marketing experiment, Earthweb is distributing its Java Chat client using a technique it calls transparent distribution. Web sites can host their own chats on Earthweb's chat server ([http:// chat .earthweb.com/](http://chat.earthweb.com/)) by licensing a customized piece of HTML code to put on their Web pages. That code downloads Earthweb's chat client and connects to a private chat for that Web site on Earthweb's chat server. The service is free for now and has more than 8,000 chats running on it, according to Earthweb. After Sept. 30, a subscription to the chat server will cost \$200 per year.

But the growing availability of Java -based products can't disguise the fact that Java development is still in the formative stages. While a year may seem like a long time, it's barely a start in the life of a programming language. Java will really take off once more standards are in place and there's a more stable environment for running Java applets.

That will happen eventually-it just hasn't yet.

...Explorer includes FTP, News, and Mail features, most of its strengths are in the sophisticated browser .

Multithreading allows multiple connections to a single server to speed downloads, and you can scroll...

...all-in-one search engine page is right on the tool bar.

Explorer supports many HTML 3.0 and Netscape extensions, such as tables and centered or aligned text and graphics...

...Microsoft's own enhancements, like backgrounds that remain stationary while you scroll through text.

The browser can display eye-catching scrolling marquees and play inline .avi video and background sound files...

...have the Windows 95-specific features of this version, they should help promote the Microsoft browser as a serious multiplatform alternative to Netscape Navigator.

Microsoft, Redmond, Wash.; 206-635-7122; [http:// www .microsoft.com/](http://www.microsoft.com/)

Internet Chameleon 4.6

Internet Chameleon is like one of those precision tool...

...IP utilities and applications.

Among the tools you'll certainly use is Chameleon's WebSurfer browser , notable chiefly for its excellent hotlists. Many of the functions folded into some other browsers...

...container, however, you can add any of these other applications, such as NEWTNews, to the browser 's Tools menu, and use them as if they were part of WebSurfer.

Applications in the suite include gopher, FTP, and Usenet news clients, Internet Relay Chat , viewers/players for sounds, image files , and TrueSpeech and RealAudio files. Archie, Finger, Ping, and Whois utilities also are included, along with personal Web and FTP servers and an HTML page editor. NetManage's collection is so eclectic it even provides a TWAIN-compatible scanner...

...and offered to e-mail it for us with no additional setup.

WebSurfer offers partial HTML 3.0 support, doing a good job on tables, but it falls down in other...

...by the time you read this.) You won't buy this \$400 package for the browser , though. The steep tariff becomes cost-effective only if you need some of its advanced...

...files in it to your PC just by copying the folder.

WebSpider is a WYSIWYG HTML editor that creates pages you then can publish using the package's Personal Web Server...

...Chameleon is an impressive set of tools.

NetManage Inc., Cupertino, Calif.; 408-973-7171; [http:// www .netmanage.com/](http://www.netmanage.com/)

Netscape Navigator 2.0

One of the reasons Netscape Navigator is so hard...multiple attachments are encoded and decoded on the fly.

Not satisfied to wait for the HTML 3.0 standard to solidify, Netscape has released a relentless torrent of improvements, most of...

...a target window. Of course, Navigator's Windows 95 and NT versions include support for Java, with built-in JavaScript (which you can turn off if you're not eager to have these miniapplets appearing in your browser)

An upgraded Gold edition of Navigator has all these features plus a built-in WYSIWYG HTML editor that can create new pages from scratch or modify downloaded pages with drag-and...

...of the market. Trailblazing innovations like those in Navigator 2.0 make this leading-edge browser a favorite to grab even more users.

Netscape, Mountain View, Calif.; 415-528-3777; [http:// www .netscape.com/](http://www.netscape.com/)

Quarterdeck InternetSuite 2.0

Quarterdeck Corp.'s InternetSuite is filled with goodies. From...

...Oddly, with so many great features, Quarterdeck neglected the ability to view message threads.

The browser lets you view Web pages simultaneously with their HTML source, using a horizontally split screen. It also has one of the nicest folder arrangements...

...view folders as text and/or icons, and you can drag an icon from the browser -the most intuitive of all the browsers we looked at-to the folder to add...

...the most fun to use.

Quarterdeck Corp., Marina Del Rey, Calif.; 310-309-3700; [http:// www .quarterdeck.com/](http://www.quarterdeck.com/)

Spyglass Mosaic 2.1

An exception to the basic game plan for this roundup of browser suites, Spyglass Mosaic 2.1 has no mail module or Usenet reader; it's a browser, pure and simple. But it is also far and away the most widely used original equipment manufacturer browser product on the market. In fact, you can't buy Spyglass Mosaic, as such, but it constitutes-in various customized guises-the browser component of several of the suites we review here.

One strength of Mosaic 2.1...in mind when considering an Internet suite.

Spyglass Inc., Naperville, Ill.; 708-505-1010; [http:// www .spyglass.com/](http://www.spyglass.com/)

Netscape Readies IP App Platform

PUBLICATION DATE: 950918

WORD COUNT: 943

The leading provider of World Wide Web browser software will begin shipping a new version of its Navigator client, as well as Web- development tools based on Sun Microsystems Inc.'s Java object- oriented programming language, in December.

These will prove to be key assets for developers...

...need to launch a helper application for each new format.

Unix-based Mail Client

The browser also includes a Unix-based mail client that lets users send electronic mail securely by...

...does support the Simple Mail Transfer Protocol and POP3 standards. Release 2.0 also supports chat and the ability to send and receive files via file transfer protocol.

Perhaps even more...

...Mountain View, Calif.-based Netscape is introducing a new scripting language, which is based on Java but doesn't require programming expertise.

"Netscape Scripting Language is designed to allow power users...

...the client and the server."

Netscape's scripting language is a subset of Sun's Java , and does not let users create new classes of objects. Instead, the browser comes with its own object library.

A separate product, Netscape Navigator Gold 2.0, includes...

...bar that remains in place when moving to the next page.

"Netscape has turned the browser into a universal application-distribution mechanism," said Geoff Baehr, chief network officer at Sun, Mountain View, Calif.

Java technology lets users distribute program functions along with content, since it can include code that...

...or check to see if there is enough disk space to download video. And because Java is platform independent, developers need to write the programs only once.

Another bonus with Java is that it includes several layers of security, which prevents software that is downloaded to a user machine from infecting the system with a virus. Java applets can include digital signatures, letting corporations restrict usage.

Meanwhile, Netscape also aims to give...

...to different servers and the links will reconnect automatically.

LiveWire includes extensions for forms processing, HTML on the fly and interfacing with legacy applications. "Server extensions allow you to publish HTML pages to a Web server and compile the scripting- language programs so they run anywhere...

...Y.-based electronic publisher.

"My problem has been that not everyone has a Netscape compatible browser , and we're trying to publish a general-interest publication with users coming in from...

...On-Line) and CompuServe," White said.

The Navigator 2.0 evaluation is available at [http:// www .net-scape.com](http://www.netscape.com) and will be \$49. The beta version of Navigator Gold 2.0...

Rating the fastest browsers - For pure speed, it's NCSA Mosaic

PUBLICATION DATE: 950522

WORD COUNT: 1645

TEXT:

new york - Every browser claims it is the fastest on the planet. What's the truth?

... best all around, though not necessarily the fastest in every specific application. The online service browser from CompuServe and Prodigy were both good, but not up to the level of the...

...specifics:

Netscape Navigator 1.1

Netscape Communications Corp.'s Netscape is the most widely used browser on the Web, and for good reason. This browser 's speed and performance were among the best of those we tested, displaying text before ...

...for this - is in the extensions it has written. Early support for HyperText Markup Language (HTML) 3.0 capabilities such as tables, backgrounds and animation makes Netscape the browser of choice for users wanting to experience the cutting edge of Web page design.

That...

...Portable Document Format (PDF), Virtual Reality Modeling Language (VRML), and Sun Microsystems Inc.'s Hot Java - tightly with its own browser .

The browser also integrates support for accessing newsgroups and sending e-mail, and simplifies the process of...

...real- world usability. Netscape is free for evaluation; \$39 for license.

See Netscape at [http:// www .netscape.com](http://www.netscape.com).

Rating: Five stars

NCSA Mosaic 2.0 Beta 4

The original Mosaic browser is still in many ways the best - at least when it comes to speed. Persistent...

...list manager.

The interface is busier than Netscape, but still intuitive. Mosaic also supports some HTML 3.0 extensions, most notably tables, as well as a variety of helper applications.

The...

...Supercomputing Applications, still is essentially free for individual (non-commercial) use.

See NCSA at [http:// www .ncsa.uiuc.edu/SDG/Software/Mosaic/NCSAMosaicHome.html](http://www.ncsa.uiuc.edu/SDG/Software/Mosaic/NCSAMosaicHome.html) .

Rating: Five stars

Spyglass Enhanced Mosaic 2.0

Spyglass Inc. is the company that has...

...top tier, but it handles text and graphics well and allows for quick

navigation. The browser has a clean interface and a passable bookmark system.

On the electronic commerce side, the...

...Terisa Systems Inc.'s S-HTTP/SSL protocol will be added shortly.

Key to the browser's functionality is a software development interface - the browser industry's first - that lets others write third-party applications that work in conjunction with the browser. Enhanced Mosaic includes built-in support for sound files, plus separate GIF and JPEG graphic viewers. Price varies depending on reseller.

Rating: Four stars

CompuServe/Spry Air Mosaic

Because CompuServe offers a dial-up Point to Point Protocol (PPP) connection to the Internet, customers can use any browser they like. The online service's NetLauncher, however, does come packaged with the Air Mosaic browser from Spry Inc.

Air Mosaic scored very similarly to Enhanced Mosaic in speed and navigation. The browser has a simpler, less cluttered interface than other browsers tested, but like the others includes integrated newsgroup and e-mail functions.

Although the core Air Mosaic browser is offered by Spry in a variety of packages, we tested a new version that...

...0 package. This new version includes the first client implementation of S-HTTP, enabling the browser to conduct secure transactions with servers running S-HTTP. (The browser is likely to eventually support SSL, as well, since CompuServe now is a Terisa investor...

...a simplified method for establishing an Internet account through CompuServe.

If you want the AirMosaic browser only, use Co-puServe's NetLauncher (free for CompuServe users) or Spry's AirMosaic (\$39)

See Spry at <http://www.spry.com>.

Prodigy

Prodigy may get some heat for bringing waves of newbies onto the Net, but the latest version of its Web browser is by all measures a success. It is probably the easiest browser to use and set up - simply install Prodigy and you've done it; no need to worry about TCP/IP stacks or SLIP/PPP connections.

And the browser, itself, scores as high as Enhanced Mosaic or AirMosaic in speed and navigation. Like the ...full connection to the Internet, users are limited to the Net tools Prodigy provides. The browser is free with a Prodigy account.

See Prodigy at <http://www.astranet.com>.

Rating: Three and a half stars

Pipeline USA

Pipeline began in New York...

...a standard phone connection - no TCP/IP stack or PPP/SLIP connection is required. The browser itself is serviceable - fairly fast but somewhat finicky in its navigation. A common problem we...

...was clicking on a hot-link and not getting sufficient feedback to know if the browser was responding.

On the plus side, the browser includes a good bookmark with lots of Web hot spots preloaded. It also can download...

...flat monthly fee of \$19.95, with no limits on usage.

Browsers of note not tested

Quarterdeck Office Systems Inc. this month is releasing the final beta build of its Quarterdeck Mosaic browser . The product includes an easy-to-use folder system for hot-lists/history that represents a great improvement over anything out there today. The final version of the browser will ship next month. America Online's new browser is in public beta right now, and by most accounts is off to a slow start. AOL Web newsgroups are awash with accounts of problems, from browser crashes to the inability to reach common URLs. We had the same problems in testing...

...also later this year will ship a new product called WebShark, which integrates a Web browser with other applications under a single interface.
